SAFETY PRECAUTIONS AND ELECTRICAL REQUIREMENTS

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRICAL SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR OTHER MOISTURE.

CAUTION: TO REDUCE THE RISK OF ELECTRICAL SHOCK, DO NOT REMOVE COVER. NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

WARNING: IF NOT PROPERLY GROUNDED THE MOTU 828 COULD CAUSE AN ELECTRICAL SHOCK.

The MOTU 828 is equipped with a three-conductor cord and grounding type plug which has a grounding prong, approved by Underwriters' Laboratories and the Canadian Standards Association. This plug requires a mating three-conductor grounded type outlet as shown in Figure A below.

If the outlet you are planning to use for the MOTU 828 is of the two prong type, DO NOT REMOVE OR ALTER THE GROUNDING PRONG IN ANY MANNER. Use an adapter as shown below and always connect the grounding lug to a known ground. It is recommended that you have a qualified electrician replace the TWO prong outlet with a properly grounded THREE prong outlet. An adapter as illustrated below in Figure B is available for connecting plugs to two-prong receptacles.

**WARNING:** THE GREEN GROUNDING LUG EXTENDING FROM THE ADAPTER MUST BE CONNECTED TO A PERMANENT GROUND SUCH AS TO A PROPERLY GROUNDED OUTLET BOX. NOT ALL OUTLET BOXES ARE PROPERLY GROUNDED.

If you are not sure that your outlet box is properly grounded, have it checked by a qualified electrician. NOTE: The adapter illustrated is for use only if you already have a properly grounded two-prong receptacle. Adapter is not allowed in Canada by the Canadian Electrical Code. Use only three wire extension cords which have three-prong grounding type plugs and three-prong receptacles which will accept the MOTU 828 plug.

IMPORTANT SAFEGUARDS

1. Read instructions - All the safety and operating instructions should be read before operating the MOTU 828.
2. Retain instructions - The safety instructions and owner's manual should be retained for future reference.
3. Heed Warnings - All warnings on the MOTU 828 and in the owner's manual should be adhered to.
4. Follow Instructions - All operating and use instructions should be followed.
5. Cleaning - Unplug the MOTU 828 from the computer before cleaning and use a damp cloth. Do not use liquid or aerosol cleaners.
6. Overloading - Do not overload wall outlets and extension cords as this can result in a risk of fire or electrical shock.
7. Power Sources - This MOTU 828 should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your location, consult your local power company.
8. Power-Cord Protection - Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them. Pay particular attention to cords and plugs, convenience receptacles, and the point where they exit from the MOTU 828.
9. Lightning - For added protection for the MOTU 828 during a lightning storm, unplug it from the wall outlet. This will prevent damage to the MOTU 828 due to lightning and power line surges.
10. Servicing - Do not attempt to service the MOTU 828 yourself as opening or removing covers will expose you to dangerous voltage and other hazards. Refer all servicing to qualified service personnel.
11. Damage Requiring Service - Unplug the MOTU 828 from the computer and refer servicing to qualified service personnel under the following conditions.
   a. When the power supply cord or plug is damaged.
   b. If liquid has been spilled or objects have fallen into the MOTU 828.
   c. If the MOTU 828 has been exposed to rain or water.
   d. If the MOTU 828 does not operate normally by following the operating instructions in the owner's manual.
   e. If the MOTU 828 has been dropped or the cabinet has been damaged.
   f. When the MOTU 828 exhibits a distinct change in performance, this indicates a need for service.
12. Replacement Parts - When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.
13. Safety Check - Upon completion of any service or repairs to this MOTU 828, ask the service technician to perform safety checks to determine that the product is in safe operating conditions.

ENVIRONMENT

Operating Temperature: 10°C to 40°C (50°F to 104°F)

AVOID THE HAZARDS OF ELECTRICAL SHOCK AND FIRE

Do not handle the power cord with wet hands. Do not pull on the power cord when disconnecting it from an AC wall outlet. Grasp it by the plug.

INPUT

CAUTION: DANGER OF EXPLOSION IF BATTERY IS REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY MANUFACTURER. DISPOSE OF USED BATTERY ACCORDING TO MANUFACTURER’S INSTRUCTIONS.

About the Mark of the Unicorn License Agreement and Limited Warranty on Software

TO PERSONS WHO PURCHASE OR USE THIS PRODUCT: carefully read all the terms and conditions of the “click-wrap” license agreement presented to you when you install the software. Using the software or this documentation indicates your agreement to the terms and conditions of that license agreement.

Mark of the Unicorn, Inc. ("MOTU") owns both this program and its documentation. Both the program and the documentation are protected under applicable copyright, trademark, and trade-secret laws. Your right to use the program and the documentation are limited to the terms and conditions described in the license agreement.

Reminder of the terms of your license

This summary is not your license agreement, just a reminder of its terms. The actual license can be read and printed by running the installation program for the software. That license agreement is a contract, and clicking "Accept" binds you and MOTU to all its terms and conditions. In the event anything contained in this summary is incomplete or in conflict with the actual click-wrap license agreement, the terms of the click-wrap agreement prevail.

YOU MAY: (a) use the enclosed program on a single computer; (b) physically transfer the program from one computer to another provided that the program is used on only one computer at a time and that you remove any copies of the program from the computer from which the program is being transferred; (c) make copies of the program solely for backup purposes. You must reproduce and include the copyright notice on a label on any backup copy.

YOU MAY NOT: (a) distribute copies of the program or the documentation to others; (b) rent, lease grant sublicenses or other rights to the program; (c) provide use of the program in a computer service business, network, time-sharing, multiple CPU or multiple user arrangement without the prior written consent of MOTU; (d) translate, adapt, reverse engineer, decompile, disassemble, or otherwise alter the program or related documentation without the prior written consent of MOTU.

MOTU warrants to the original licensee that the disk(s) on which the program is recorded be free from defects in materials and workmanship under normal use for a period of ninety (90) days from the date of purchase as evidenced by a copy of your receipt. If failure of the disk has resulted from accident, abuse or misapplication of the product, then MOTU shall have no responsibility to replace the disk(s) under this Limited Warranty.

THIS LIMITED WARRANTY AND RIGHT OF REPLACEMENT IS IN LIEU OF, AND YOU HEREBY WAIVE, ANY AND ALL OTHER WARRANTIES, BOTH EXPRESS AND IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE LIABILITY OF MOTU PURSUANT TO THIS LIMITED WARRANTY SHALL BE LIMITED TO THE REPLACEMENT OF THE DEFECTIVE DISK(S), AND IN NO EVENT SHALL MOTU OR ITS SUPPLIERS, LICENSORS, OR AFFILIATES BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO LOSS OF USE, LOSS OF PROFITS, LOSS OF DATA OR DATA BEING RENDERED INACCURATE, OR LOSSES SUSTAINED BY THIRD PARTIES EVEN IF MOTU HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, WHICH MAY VARY FROM STATE TO STATE. SOME STATES DO NOT ALLOW THE LIMITATION OR EXCLUSION OF LIABILITY FOR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

Update Policy

In order to be eligible to obtain updates of the program, you must complete and return the attached Mark of the Unicorn Purchaser Registration Card to MOTU.

Copyright Notice

Copyright © 2001 by Mark of the Unicorn, Inc. All rights reserved. No part of this publication may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any human or computer language, in any form or by any means whatsoever, without express written permission of Mark of the Unicorn, Inc., 1280 Massachusetts Avenue, Cambridge, MA, 02138, U.S.A.

Limited Warranty on Hardware

Mark of the Unicorn, Inc. and S&S Research ("MOTU/S&S") warrant this equipment against defects in materials and workmanship for a period of NINETY (90) DAYS from the date of original retail purchase. This warranty applies only to hardware products; MOTU software is licensed and warranted pursuant to separate written statements.

If you discover a defect, first write or call Mark of the Unicorn at (617) 576-2760 to obtain a Return Merchandise Authorization Number. No service will be performed on any product returned without prior authorization. MOTU will, at its option, repair or replace the product at no charge to you, provided you return it during the warranty period, with transportation charges prepaid, to Mark of the Unicorn, Inc., 1280 Massachusetts Avenue, MA 02138. You must use the product's original packing material for in shipment, and insure the shipment for the value of the product. Please include your name, address, telephone number, a description of the problem, and the original, dated bill of sale with the returned unit and print the Return Merchandise Authorization Number on the outside of the box below the shipping address.

This warranty does not apply if the equipment has been damaged by accident, abuse, misuse, or misapplication; has been modified without the written permission of MOTU, or if the product serial number has been removed or defaced.

ALL IMPLIED WARRANTIES, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO NINETY (90) DAYS FROM THE DATE OF THE ORIGINAL RETAIL PURCHASE OF THIS PRODUCT.

THE WARRANTY AND REMEDIES SET FORTH ABOVE ARE EXCLUSIVE AND IN LIEU OF ALL OTHERS, ORAL OR WRITTEN, EXPRESS OR IMPLIED. NO MOTU/S&S dealer, agent, or employee is authorized to make any modification, extension, or addition to this warranty.

MOTU/S&S ARE NOT RESPONSIBLE FOR SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES RESULTING FROM ANY BREACH OF WARRANTY, OR UNDER ANY LEGAL THEORY, INCLUDING LOST PROFITS, DOWNTIME, GOODWILL, DAMAGE OR REPLACEMENT OF EQUIPMENT AND PROPERTY AND COST OF RECOVERING REPROGRAMMING, OR REPRODUCING ANY PROGRAM OR DATA STORED IN OR USED WITH MOTU/S&S PRODUCTS.

Some states do not allow the exclusion or limitation of implied warranties or liability for incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may have other rights which vary from state to state.

MOTU, AudioDesk, MOTU, Mark of the Unicorn and the unicorn silhouette logo are trademarks of Mark of the Unicorn, Inc.
Quick Reference: MOTU 828 Front Panel

This is a standard quarter-inch stereo headphone jack. Its output matches the main outs on the rear panel. The volume knob controls both the headphone out and the main outs.

The MOTU 828 lets you monitor any analog input (or input pair) via the main outs (and the headphone out). This knob controls the level of this monitored signal.

These two trim knobs provide up to 40dB of gain for inputs 1 and 2. These inputs also have microphone pre-amps, so you can plug in a microphone and plug in a guitar or other instrument. The approximate trim positions for inputs 1 and 2 for microphones are shown in the diagram. For guitars and other instruments, start with these positions and then adjust according to the level meters in your audio software.

If you plug in a condenser microphone (with phantom power), start with the trim knob at about 12 o'clock. For a dynamic mic (no phantom), try 3 o'clock. Then calibrate the input levels in your host audio software to make sure the level isn't clipping (clipping is bad and causes unwanted distortion).

This switch provides phantom power for microphones on inputs 1 and 2. Up is on.

These three input trim knobs provide up to 40dB of gain for inputs 3 through 8 (in pairs). These inputs don't have mic pre-amps, so they are best for line-level inputs such as guitars and other studio gear. The approximate trim positions for these inputs are shown in the diagram. Start with these positions and then adjust according to the level meters in your audio software.

These lights indicate signal presence on the analog inputs and outputs. Their threshold is around -42 dB. They do not indicate clipping in any way; use your host audio software level meters to calibrate input and output levels.

These lights indicate signal presence on the digital inputs and outputs. Their threshold is around -42 dB. They do not indicate clipping in any way; use your host audio software level meters to calibrate input and output levels.

These lights indicate the global sample rate at which the MOTU 828 is operating. If the MOTU 828 Control Panel is set to use an external clock source, these lights will flash.

FireWire is a "plug-and-play" protocol. That means that you can turn off the MOTU 828 and turn it back on without having to change the MOTU 828's settings in the MOTU 828 Control Panel, the MOTU 828 needs to be plugged in and switched on.

When using a clock signal, keep in mind that you may need to change the MOTU 828's settings in the MOTU 828 Control Panel. If you are using an external clock, these lights will flash.

Approximate trim positions on inputs 3-8:
- Line guitar
- Synths, CD players, consumer electronics, etc.
- Pro-level gear
- Line guitar (with heavy distortion)
- Dynamic microphone (with phantom power)
- Condenser microphone (with 48V phantom power)

If you plug in a condenser microphone (with phantom power), start with the trim knob at about 12 o'clock. For a dynamic mic (no phantom), try 3 o'clock. Then calibrate the input levels in your host audio software to make sure the level isn't clipping (clipping is bad and causes unwanted distortion).

Quick Reference: MOTU 828 Rear Panel

Connect the MOTU 828 to the computer here using the standard 1394 FireWire cable provided with your MOTU 828. These jacks provide stereo, 24-bit S/PDIF digital input and output.

If you are using the MOTU 828 with an ADAT, use this standard ADAT SYNC INPUT to connect the MOTU 828 to the end of your ADAT sync chain. For example, if you have three ADATs, chain the ADATs in the usual fashion (SYNC OUT to SYNC IN, etc.), and then connect the last ADAT's SYNC OUT to the SYNC IN. This connection allows you to make sample-accurate audio transfers between AudioDesk (or other sample-accurate software) and the ADATs. If you have a MOTU MIDI Timepiece AV or Digital Timepiece, make it the master of the ADAT sync chain so that you can control everything from AudioDesk (or your other MIDI Machine Control compatible software).

Connect a standard foot switch here for hands-free punch-in and punch-out during recording. For details about how to set this up, see "Enable Pedal" on page 37.

These Neutrik™ jacks for inputs 1 and 2 accept either a mic (XLR) cable or a quarter-inch plug. Each is equipped with a balanced mic preamp that gives you 40 dB of input gain adjustment, you can probably get away with plugging in a guitar (depending on the guitar). These optical digital I/O connectors can be connected either to an ADAT-compatible "lightpipe" device (such as a digital mixer) or to a S/PDIF optical ("TDLink") compatible device, such as an effects processor or DAT machine. Be sure to set the format in the MOTU 828 Control Panel software. (See "Optical Input/Output" on page 37 for details.) ADAT optical supplies eight channels of 24-bit digital I/O, and TDLink is stereo. One special note: you can choose independent formats for the optical IN and OUT. For example, you could choose ADAT for the optical IN (for, say, eight channels of input from your digital mixer) and S/PDIF for the optical OUT (for, say, your DAT machine).

The MOTU 828's eight analog outputs are gold-plated, balanced +4dB TRS (tip/ring/sleeve) quarter-inch connectors that can also accept an unbalanced plug. They are equipped with 24-bit, 128x oversampling converters.

Analog outputs 1 and 2 are duplicated on the MOTU 828's main outputs (to the right), as well as the front panel stereo headphone jack. However, these outputs do not include any live CueMix™ Plus audio. These two balanced, quarter-inch jacks serve as the MOTU 828's main outputs. You can assign them to a set of powered studio monitors and then control the volume from the front panel "Main" volume knob. The signal that comes out of these outputs is a mix of any analog output 1 and 2 and any live CueMix™ Plus input that you have chosen to monitor from a MOTU 828 input (or input pair). To hear disk tracks in your audio software on these main outs, assign the disk tracks (and master fader) to Analog Outs 1-2.

These optical digital I/O connectors can be connected either to an ADAT-compatible "lightpipe" device (such as a digital mixer) or to a S/PDIF optical ("TDLink") compatible device, such as an effects processor or DAT machine. Be sure to set the format in the MOTU 828 Control Panel software. (See "Optical Input/Output" on page 37 for details.) ADAT optical supplies eight channels of 24-bit digital I/O, and TDLink is stereo.

One special note: you can choose independent formats for the optical IN and OUT. For example, you could choose ADAT for the optical IN (for, say, eight channels of input from your digital mixer) and S/PDIF for the optical OUT (for, say, your DAT machine). These jacks provide stereo, 24-bit S/PDIF digital input and output.

These optical digital I/O connectors can be connected either to an ADAT-compatible "lightpipe" device (such as a digital mixer) or to a S/PDIF optical ("TDLink") compatible device, such as an effects processor or DAT machine. Be sure to set the format in the MOTU 828 Control Panel software. (See "Optical Input/Output" on page 37 for details.) ADAT optical supplies eight channels of 24-bit digital I/O, and TDLink is stereo.

One special note: you can choose independent formats for the optical IN and OUT. For example, you could choose ADAT for the optical IN (for, say, eight channels of input from your digital mixer) and S/PDIF for the optical OUT (for, say, your DAT machine).

These six analog inputs are gold-plated, balanced TRS (tip/ring/sleeve) quarter-inch connectors that can also accept an unbalanced plug. The front panel trim allows you to adjust them for either +4dB or -10dB input signals. They have 24-bit, 64x oversampling converters. The six inputs (1 through 6) do not have microphone preamps, so they are best used for synthesizers, drum machines, effects processors, and other instruments. However, because the trim knobs on the front panel give you 40 dB of input gain adjustment, you can probably get away with plugging in a guitar (depending on the guitar).

These jacks provide stereo, 24-bit S/PDIF digital input and output.

Connect the MOTU 828 to the computer here using the standard 1394 FireWire cable provided with your MOTU 828.

The MOTU 828's eight analog outputs are gold-plated, balanced +4dB TRS (tip/ring/sleeve) quarter-inch connectors that can also accept an unbalanced plug. They are equipped with 24-bit, 128x oversampling converters.

These Neutrik™ jacks for inputs 1 and 2 accept either a mic (XLR) cable or a quarter-inch plug. Each is equipped with a mic preamp. 48V phantom power can be supplied via the front-panel switch. Since these inputs have mic preamps, they are ideal for microphones, guitars and other low-level sources.

The MOTU 828's eight analog outputs are gold-plated, balanced +4dB TRS (tip/ring/sleeve) quarter-inch connectors that can also accept an unbalanced plug. They are equipped with 24-bit, 128x oversampling converters.

These optical digital I/O connectors can be connected either to an ADAT-compatible "lightpipe" device (such as a digital mixer) or to a S/PDIF optical ("TDLink") compatible device, such as an effects processor or DAT machine. Be sure to set the format in the MOTU 828 Control Panel software. (See "Optical Input/Output" on page 37 for details.) ADAT optical supplies eight channels of 24-bit digital I/O, and TDLink is stereo.

One special note: you can choose independent formats for the optical IN and OUT. For example, you could choose ADAT for the optical IN (for, say, eight channels of input from your digital mixer) and S/PDIF for the optical OUT (for, say, your DAT machine).

These optical digital I/O connectors can be connected either to an ADAT-compatible "lightpipe" device (such as a digital mixer) or to a S/PDIF optical ("TDLink") compatible device, such as an effects processor or DAT machine. Be sure to set the format in the MOTU 828 Control Panel software. (See "Optical Input/Output" on page 37 for details.) ADAT optical supplies eight channels of 24-bit digital I/O, and TDLink is stereo.

One special note: you can choose independent formats for the optical IN and OUT. For example, you could choose ADAT for the optical IN (for, say, eight channels of input from your digital mixer) and S/PDIF for the optical OUT (for, say, your DAT machine).
The MOTU 828 Control Panel above is the same as the "Configure Hardware Driver" dialogs found in AudioDesk and Digital Performer (in their Basics menu). For details about the "Auto Monitor" option, see "Auto Monitor" on page 43 for Digital Performer and "Auto Monitor" on page 49 for AudioDesk.

If any of these settings are grayed out (not available), see "If MOTU 828 settings are grayed out" on page 39.

Choose the desired optical format you'd like to use for the optical input and output. Note that they don't have to be the same.

If you have a foot switch connected to the MOTU 828, these settings let you map the foot switch to any Macintosh keyboard key for both the up and down position.

Determines the master clock source for your entire MOTU 828 system. If you're just using the analog ins and outs, set this to "Internal." The other settings are for digital transfers via S/PDIF or external synchronization via the ADAT SYNC in port.

Choosing a smaller setting here reduces the delay you may hear when listening to live input that you are running through effects plug-ins in your software. But lower settings also increase the strain on your computer. For details, see "Samples Per Buffer" on page 36.

The MOTU 828 Control Panel gives you complete control over the settings in your MOTU 828 hard disk recording system. There are several ways to access these settings. But the settings are the same, regardless of how you access them.

How to access these settings

The MOTU 828 Control Panel gives you complete control over the settings in your MOTU 828 hard disk recording system. There are several ways to access these settings. But the settings are the same, regardless of how you access them.

- From the Mac OS Apple menu, choose Control Panels->MOTU 828 Control Panel.
- From within AudioDesk™ or Digital Performer™, go to the Basics menu and choose MOTU Audio System options->Configure Hardware Driver.
- Click on the 828 icon in the Macintosh Control Strip.

If you want to hear your Macintosh system beeps, as well as the audio output of any Sound Manager-compatible software, through the MOTU 828 (instead of the built-in speaker in your Mac), check this box and choose the desired MOTU 828 input and output from these menus.

Choosing a smaller setting here reduces the delay you may hear when listening to live input that you are running through effects plug-ins in your software. But lower settings also increase the strain on your computer. For details, see "Samples Per Buffer" on page 36.

If any of these settings are grayed out (not available), see "If MOTU 828 settings are grayed out" on page 39.
CHAPTER 1  About the MOTU 828

OVERVIEW
The MOTU 828 is a computer-based hard disk recording system for Mac OS and Windows that offers 18 simultaneous inputs and outputs. The MOTU 828 consists of a standard 19-inch, single-space, rack-mountable I/O unit that connects directly to a computer via a standard IEEE 1394 FireWire™ cable. The MOTU 828 offers the following:

- Eight 24-bit analog inputs and outputs
- Eight-channel ADAT optical digital I/O
- S/PDIF (optical and RCA)
- Two extra analog main outs
- Two mic preamps on inputs 1 and 2
- 48V phantom power for both mic inputs
- ADAT sync in
- Foot switch for hands-free punch-in/out
- Headphone jack
- Main volume knob (for headphone + main outs)
- CueMix™ Plus no-latency monitoring
- Individual front-panel input trim knobs

With a variety of I/O formats, mic preamps, no-latency monitoring of live input and synchronization capabilities, the MOTU 828 is a complete, portable "studio in a box" when used with a Macintosh or Windows computer. The MOTU 828 system includes AudioDesk™, full-featured audio workstation software for Mac OS that supports both 16-bit and 24-bit recording. Also included is an ASIO driver for multi-channel operation with any Macintosh audio software that supports ASIO drivers.

THE MOTU 828 I/O REAR PANEL
The MOTU 828 rear panel has the following connectors:

- Eight gold-plated, balanced +4dB quarter-inch (TRS) analog outputs (with 24-bit converters)
- Six gold-plated, balanced +4 dB quarter-inch (TRS) analog inputs (with 24-bit converters)
- Two additional analog mic/line inputs on Neutrik combo (XLR/quarter-inch) connectors equipped with mic pre-amps
- One set of ADAT optical 'light pipe' connectors (8 channels of ADAT optical I/O), individually switchable to optical S/PDIF ('TOSLink')
- RCA S/PDIF in/out
- Two balanced +4 quarter-inch TRS main outputs with volume knob (on the front panel)
- One 9-pin ADAT SYNC IN connector
- One 1394 FireWire jack

18 simultaneous inputs and outputs
All MOTU 828 inputs and outputs can be used simultaneously, for a total of 18 inputs and outputs (8 analog + 8 ADAT optical + 2 RCA S/PDIF).

Analog
The analog inputs are equipped with 24-bit, 64x oversampling A/D converters. The analog outputs have 24-bit 128x oversampling D/A converters. All audio is carried to the computer in a 24-bit data stream. The eight analog outputs are on balanced
TRS +4dB quarter-inch jacks, as are the six quarter-inch input jacks below them. All of these jacks can also accept unbalanced plugs.

All analog inputs can be gain-adjusted with the trim knobs on the front panel. The range of these knobs is approximately 40 dB.

**Mic Inputs**
Analog inputs 1 and 2 are each equipped with a mic preamp on a Neutrik™ combo-style connector that accepts either a mic (XLR) cable or a cable with a quarter-inch plug. Defeatable 48V phantom power is supplied by a front panel switch.

**Main Outs**
For main stereo output, analog outputs 1 and 2 are duplicated as a stereo pair of balanced, +4dB quarter-inch TRS jacks. If an input (or input pair) is being monitored via the MOTU 828’s CueMix™ Plus monitoring feature, the monitored signal is summed with the main outs. You can control the volume of the main outs with the front panel volume knob. You can independently control the CueMix Plus monitored signal with the Monitor level knob on the front panel.

**Optical**
The MOTU 828 optical jacks support two digital audio formats: ADAT and S/PDIF. The ADAT optical format provides eight channels of 24-bit digital audio at either 44.1 or 48 kHz. The optical S/PDIF format (often referred to as TOSLink), supplies stereo S/PDIF input or output.

**S/PDIF**
The MOTU 828 rear panel provides S/PDIF input and output in two different formats: RCA “coax” and optical “TOSLink”. The RCA jacks are dedicated to the S/PDIF format. The TOSLink jacks can be used either for the TOSLink format or for ADAT optical. In addition, the optical input and output jacks can operate independently. For example, the optical input can be set to TOSLink while the optical output is set to ADAT.

**ADAT Sync: sample-accurate synchronization**
The MOTU 828’s standard 9-pin ADAT SYNC IN connector provides sample-accurate synchronization with all Alesis ADAT tape decks connected to the system—or any device that supports the ADAT sync format. For example, if you digitally transfer a single track of material from an ADAT via light pipe into audio workstation software on the computer, and then transfer the track back to the ADAT, it will be recorded exactly at its original location, down to the sample.

**Punch in/out**
The quarter-inch Punch in/out jack accepts a standard foot switch. When you push the foot switch, the MOTU 828 triggers a programmable keystroke on the computer keyboard. For example, with MOTU’s Digital Performer audio sequencer software, the foot switch triggers the 3 key on the numeric keypad, which toggles recording in Digital Performer. Therefore, pressing the foot switch is the same as pressing the 3 key. The MOTU 828 Control Panel software lets you program any keystroke you wish.

**1394 FireWire**
The 1394 FireWire jack accepts a standard IEEE 1394 FireWire cable to connect the MOTU 828 to a FireWire-equipped Macintosh or Windows computer.

**THE MOTU 828 FRONT PANEL**

**Headphone output and main volume control**
The MOTU 828 front panel includes a quarter-inch stereo headphone output jack and volume knob. The headphone output matches the main stereo outs, and the volume knob controls both the headphones and the main outs.
CueMix™ Plus no-latency monitoring
The MOTU 828 provides CueMix™ Plus no-latency monitoring from any analog input (or input pair). The CueMix monitored signal is mixed with outputs 1-2 (which are duplicated on the main outs). An independent volume knob is provided for the monitored signal.

Input trim knobs and phantom power switch
The Input Gain section provides 40 dB of trim for the eight analog inputs. Inputs 1 and 2 have independent trim knobs, while inputs 3 through 8 have one knob per input pair (3-4, 5-6, and 7-8). The phantom power switch provides 48V phantom power to the two mic inputs. Up is on; down is off.

Activity lights
The front panel of the MOTU 828 displays several banks of activity LEDs. The Analog Activity, S/PDIF and Optical lights display the presence of signal on the input or output. The threshold for these lights is approximately -42 dB. The Clock lights indicate the global sample rate (as chosen in the MOTU 828 Control Panel software).

16-BIT AND 24-BIT RECORDING
The MOTU 828 system handles all data with a 24-bit signal path, regardless of the I/O format. You can record and play back 16-bit or 24-bit audio files at either 44.1 or 48 KHz via any of the MOTU 828’s analog or digital inputs and outputs. 24-bit audio files can be recorded with any compatible host application that supports 24-bit recording.

Audiodesk
AudioDesk is a full-featured, 24-bit audio workstation software package included with the MOTU 828 system (for Macintosh only). AudioDesk provides multi-channel waveform editing, automated virtual mixing, graphic editing of ramp automation, real-time effects plug-ins with 32-bit floating point processing, crossfades, support for many third-party audio plug-ins (in the MOTU Audio System and Adobe Premiere formats), background processing of file-based operations, sample-accurate editing and placement of audio, and more.

Digital Performer
The MOTU 828 system is fully integrated with MOTU’s award-winning Digital Performer audio sequencer software package.

Other Host Audio Software
The MOTU 828 system includes a standard Mac OS Sound Manager driver for stereo I/O with any audio application that supports Sound Manager.

The MOTU 828 also includes a Macintosh ASIO driver for multi-channel compatibility with any audio application that supports ASIO drivers.

A Computer-Based System
Regardless of what software you use with the MOTU 828, the host computer determines the number of tracks the software can record and play simultaneously, as well as the amount of real-time effects processing you can apply to your mix. A faster computer with more RAM and faster hard drives will allow more simultaneous tracks and real-time effects than a slower computer with less RAM and slower hard drives. Today’s fastest computers can typically play as many as 32 tracks or more. Standard third-party SCSI acceleration products can also help you achieve higher track counts.
CHAPTER 2  Packing List and Macintosh System Requirements

PACKING LIST
The MOTU 828 ships with the items listed below. If any of these items are not present in your MOTU 828 box when you first open it, please immediately contact your dealer or MOTU.

- One MOTU 828 I/O rack unit
- One 1394 “FireWire” cable
- Power cord
- One MOTU 828 Mac/Windows manual
- One AudioDesk Manual
- One cross-platform CD-ROM
- Product registration card

MACINTOSH SYSTEM REQUIREMENTS
The MOTU 828 system requires the following Macintosh system:

- A G3/300Mhz Power Macintosh or faster equipped with at least one FireWire port
- At least 64 Mb (megabytes) of RAM (128 Mb or more is recommended)
- Mac OS version 8.6 or later (MacOS 9 or later is recommended)
- FireWire Enabler and FireWire Support system extensions 2.4 or later
- A large hard drive (preferably at least 8 Gb)

PLEASE REGISTER TODAY!
Please send in the registration card included with your MOTU 828 system. As a registered user, you will be eligible to receive on-line technical support email and announcements about product enhancements as soon as they become available. Only registered users receive these special update notices, so please, complete and mail this registration card!

There is also an AudioDesk software registration card found at the beginning of your AudioDesk manual. Please be sure to fill out and return this card as well, so that you will be eligible to receive on-line technical support email and announcements about AudioDesk software enhancements as soon as they become available.

Thank you for taking the time to register your new MOTU products!
CHAPTER 3  Installing the MOTU 828 Hardware

OVERVIEW
Here’s an overview for installing the MOTU 828:

Connect the MOTU 828 interface . . . . . . . . . . . .15
Connect the MOTU 828 audio interface to the computer with the supplied FireWire cable.

Connect inputs and outputs . . . . . . . . . . . . . . . . . .16
Make optical and analog connections as desired.

A typical studio setup (no mixer) . . . . . . . . . . . . . . . .17
An example setup for computer-based mixing/FX.

Using the MOTU 828 with a mixer . . . . . . . . . . . . . . . .18
An example setup for a mixer-based studio.

Making sync connections . . . . . . . . . . . . . . . . . . . . . .19
If you need to resolve the MOTU 828 with other devices in your studio, make the necessary synchronization connections.

Do you need a synchronizer? . . . . . . . . . . . . . . . . . . . . . .20
Sample-accurate sync . . . . . . . . . . . . . . . . . . . . . . . . . .21
Sample-accurate sync with ADATs . . . . . . . . . . . . . . . . .22
ADAT sync with no synchronizer . . . . . . . . . . . . . . . . . .23
Sync to SMPTE, word clock, video . . . . . . . . . . . . . . . .24
Syncing optical devices . . . . . . . . . . . . . . . . . . . . . . . .25
Syncing S/PDIF devices . . . . . . . . . . . . . . . . . . . . . . . .26
Syncing large systems . . . . . . . . . . . . . . . . . . . . . . . . .27

CONNECT THE MOTU 828 INTERFACE
1  Plug one end of the MOTU 828 FireWire cable (included) into the FireWire socket on the computer as shown below in Figure 3-1.

2  Plug the other end of the FireWire cable into the MOTU 828 I/O as shown below in Figure 3-1.

Figure 3-1: Connecting the MOTU 828 to the computer.
CONNECT INPUTS AND OUTPUTS
The MOTU 828 audio interface has the following input and output connectors:

- 8 balanced, +4 dB quarter-inch analog outputs
- 6 balanced +4 dB quarter-inch analog inputs
- 2 Neutrik™ XLR/quarter-inch analog inputs
- 2 balanced, +4 dB quarter-inch TRS main outs
- 1 pair of RCA S/PDIF in and out
- 1 pair of optical in/out switchable between ADAT (“Lightpipe”) or optical S/PDIF (TOSLink)

Here are a few things you should keep in mind as you are making these connections to other devices.

Mic/line inputs
The mic/line inputs (1 and 2) have mic preamps, so connect your microphone(s) to inputs 1 and/or 2. If your microphone requires phantom power, move the 48V phantom power switch on the front panel to the up (enabled) position. Use the trim knobs on the front panel to adjust the input level as needed for each input.

Quarter-inch analog
The quarter-inch analog inputs (3-8) and outputs (1-8) are balanced TRS connectors that can also accept an unbalanced plug. Use the trim knobs on the front panel to adjust the input level as needed for each input (or input pair).

Optical
Reminder: optical goes OUT to IN and IN to OUT, like MIDI.

The optical connectors can be connected to either an ADAT “lightpipe” device or an optical S/PDIF “TOSLink” device. Just make the connections as needed and then you’ll set the format later on in the MOTU 828 Control Panel. The input is independent from the output; for example, you could connect ADAT optical input from your digital mixer and connect optical output to the TOSLink input on your DAT deck.

Main outs
The main outputs, as well as the headphone output on the front panel, match the output from Analog outputs 1-2. In addition, any live inputs that are being monitored via CueMix™ Plus are summed to the signal on the main outs. The main out volume is controlled by the main volume knob on the front panel. In a standard studio configuration, the main outs are intended for a pair of studio monitors. However, if you are using the MOTU 828 in other ways, such as in a live performance situation, you could use the main outs for stage monitors while outputs 1 and 2 are used for the PA.

Using an external mixer
The MOTU 828 can be used without a mixing board, as shown on the opposite page in Figure 3-3. In this setup, all mixing and effects processing occurs in the audio software running on the computer.

If you’d like to use external mixing, see “Using the MOTU 828 with a mixer” on page 18.

Figure 3-2: the MOTU 828 rear panel.
A TYPICAL STUDIO SETUP (NO MIXER)

Here is a typical MOTU 828 studio setup. This rig can be operated without an external mixer. All mixing and processing can be done in the computer with audio software. During recording, you can use the MOTU 828’s CueMix™ Plus no-latency monitoring to listen to what you are recording via the main outs. The MOTU 828 Control Panel software lets you choose the input (or input pair) that you wish to monitor. Guitar can be processed with plug-ins on the computer, or with an amp.

Figure 3-3: A typical MOTU 828 studio setup.
USING THE MOTU 828 WITH A MIXER
While there are many ways to use the MOTU 828 with an external mixer, typically the MOTU 828 serves as a multi-channel “pipeline” between the mixer and the computer. If your mixer is analog, connect the analog section of the MOTU 828 to your mixer. If your mixer is digital, and it has ADAT optical I/O, you can connect them optically as shown below in Figure 3-4. The MOTU 828’s available analog and S/PDIF inputs and outputs can serve as an extension to the mixer I/O, but then you will probably find yourself mixing in two places: the mixer and the computer. A word of advice: if you would like to use the MOTU 828 with an external mixer, use the mixer for mixing. Trying to mix large multitrack projects in two places can become very cumbersome very quickly.

Figure 3-4: Using the MOTU 828 with a digital mixer.
MAKING SYNC CONNECTIONS

If you connect devices digitally to the MOTU 828, or if you need to synchronize the MOTU 828 with an outside time reference such as SMPTE time code, you must pay careful attention to the synchronization connections and clock source issues discussed in the next few sections.

Do you need to synchronize the MOTU 828?

If you will be using only the MOTU 828’s analog inputs and outputs (and none of its digital I/O), and you have no plans to synchronize your MOTU 828 system to SMPTE time code, you don’t need to make any sync connections. You can skip this section and proceed to chapter 4, “Installing the MOTU 828 Macintosh Software” (page 29). After you install the MOTU 828 software, you’ll open the MOTU 828 Control Panel and set the Clock Source setting to Internal as shown below in Figure 3-5. For details, see chapter 5, “MOTU 828 Control Panel” (page 33).

Figure 3-5: You can run the MOTU 828 under its own internal clock when it has no digital audio connections and you are not synchronizing the MOTU 828 system to an external time reference such as SMPTE time code.

Situations that require synchronization

There are three general cases in which you will need to synchronize the MOTU 828 with other devices:

- Synchronizing the MOTU 828 with other digital audio devices so that their digital audio clocks are phase-locked (as shown in Figure 3-6)
- Slaving the MOTU 828 system to SMPTE time code, such as from a video deck or an analog multitrack tape recorder
- Both of the above

Synchronization is critical for clean digital I/O

Synchronization is critical in any audio system, but it is especially important when you are transferring audio between digital audio devices. Your success in using the MOTU 828’s digital I/O features depends almost entirely on proper synchronization. The following sections guide you through several recommended scenarios.

Be sure to choose a digital audio clock master

When you transfer digital audio between two devices, their audio clocks must be in phase with one another — or phase-locked. Otherwise, you’ll hear clicks, pops, and distortion in the audio — or perhaps no audio at all.

There are two ways to achieve phase lock: slave one device to the other, or slave both devices to a third master clock. If you have three or more digital audio devices, you need to slave them all to a single master audio clock.

Also remember that audio phase lock can be achieved independently of time code (location). For example, one device can be the time code master while another is the audio clock master. But only one device can be the audio clock master. If you set things up with this rule in mind, you’ll have trouble-free audio transfers with the MOTU 828.
DO YOU NEED A SYNCHRONIZER?
Whether or not you'll need a synchronizer depends on your gear and what you will be doing with your MOTU 828 system. The following pages give you specific information about common sync scenarios. At least one of them will likely apply to you. Here are some general considerations to help you figure out if you need (or want) a synchronizer for your MOTU 828 system.

You don't need a synchronizer if...
As explained earlier, the MOTU 828’s digital audio clock must be phase-locked (synchronized) with other connected digital audio devices to achieve clean digital transfers between them. Can this be accomplished without an additional digital audio synchronizer? It depends on the nature of the other devices, and what you want to do with them. You don't need a synchronizer if the device has a way of locking itself directly to the MOTU 828’s clock (via ADAT lightpipe or S/PDIF), AND if the device carries no sense of location in time. A digital mixer is a good example: it can slave to its ADAT lightpipe connection from the MOTU 828, and it has no sense of time; it just passes audio through for mixing.

An ADAT, on the other hand, does have a sense of location in time, either via SMPTE time code or via its own sample address time format (ABS). If you want to fly tracks back and forth between your computer and ADAT tapes while maintaining the audio's position in time, the ADAT SYNC port on the MOTU 828 lets you do so without a separate synchronizer — and with sample-accurate precision (if you're using AudioDesk, Digital Performer, or an ASIO 2.0-compatible program that supports sample-accurate sync). Just connect the MOTU 828 directly to the ADAT as discussed in “ADAT sync with no synchronizer” on page 23. But if you also want transport control over the entire rig (including the ADAT) from your audio software, you'll need a MIDI Machine Control-compatible synchronizer such as MOTU’s MIDI Timepiece AV, as discussed in “Sample-accurate sync” on page 21. If you are simply using the ADAT as a backup medium where you transfer eight tracks at a time and don't care about their exact location, no synchronizer is required. You can simply slave the ADAT to the optical output from the MOTU 828 as explained in “Syncing optical devices” on page 25.

Transport control from your computer
If you have ADATs or other digital recording devices connected to the MOTU 828, your audio software — if it supports MIDI Machine Control (MMC) — allows you to control the transports of everything from your computer. Most advanced audio programs support MMC. To do this, you'll also need an MMC-compatible ADAT synchronizer such as a MOTU MIDI Timepiece AV or Digital Timepiece. Synchronizers like these allow you to play, stop, rewind and locate all of your tape decks using the transport controls in the audio software. If your audio software supports ASIO 2, you can do so with sample-accurate precision. The following pages show you how to achieve MMC control, where possible.

Continuous sync to SMPTE / MTC
If you need to synchronize the MOTU 828 (and your audio software) to SMPTE time code, this requires a dedicated synchronizer, which continuously resolves the MOTU 828 to SMPTE time code, while simultaneously resolving your audio software to MIDI Time Code. When the MOTU 828 is continuously resolved, audio playback will never drift with respect to the time code. Again, the MOTU MIDI Timepiece AV and Digital Timepiece are affordable examples of this type of synchronizer. The following pages illustrate how to set up this type of synchronization with various kinds of gear. Regardless of the specific equipment you have, you can follow the basic connections shown.
SAMPLE-ACCURATE SYNC
Your MOTU 828 system provides you with the most advanced, accurate synchronization possible with Alesis ADATs (Type I and II) or any device that supports ADAT sync. Figure 3-8 below shows a few best-case scenarios for syncing the MOTU 828 with ADATs (in ABS time). Below is a brief explanation of the benefits you achieve with these setups.

Sample accurate locating
With sample accurate locating, when you transfer audio between AudioDesk (or any other sample-accurate host software such as Digital Performer) and ADATs, the audio will not drift in time — even by as little as one sample. This is the tightest possible synchronization between digital audio devices. The timing in your audio will not be affected in any way by the process of transferring it between the MOTU 828 and your ADATs. Sample-accurate locating is only possible with software that supports this feature, such as AudioDesk, Digital Performer, Cubase VST or other ASIO 2 compatible audio software.

Transport control from your computer
If you have a MIDI Timepiece AV, Digital Timepiece or any ADAT synchronizer that also supports MIDI Machine Control (MMC), you can play, stop, rewind and locate all of your ADATs using the transport controls in the audio software running on your computer. This includes cueing features like markers, position bars, playback wipers, time rulers, etc.

Continuous sync to SMPTE / MTC
This means that the MOTU 828 can be continuously resolved to SMPTE time code (or MIDI Time Code) via a dedicated synchronizer, such as the MIDI Timepiece AV. When the MOTU 828 is continuously resolved, audio playback will never drift with respect to time code.

Figure 3-8: AudioDesk and Digital Performer support sample-accurate transfers with ADATs.

Figure 3-9: These recommended combinations of hardware and software offer the tightest sync possible between the MOTU 828 and digital audio tape decks in the form of sample-accurate locating between the software and the tape decks. Sample accurate locating is possible with ADATs even without a MIDI Timepiece AV or Digital Timepiece, although you give up transport control from the computer without them.
SAMPLE-ACCURATE SYNC WITH ADATs

The MOTU 828 can achieve sample-accurate sync with AudioDesk, Digital Performer, or any ASIO 2.0-compatible audio software that also supports sample-accurate sync. Connect the MOTU 828 to the end of the ADAT chain and make the software settings shown below in Figure 3-10. If you will be using the ADAT for its analog inputs and outputs only (you won’t be using any tapes in the ADAT), treat it as an ‘optical’ device. See “Syncing optical devices” on page 25.

**What this setup provides**

- Sample-accurate locating between all ADATs, the MOTU 828, and AudioDesk or Digital Performer.
- Transport control of everything from the computer.
- Continuous sync to SMPTE time code and other sync sources (the other source is the transport master in this case).

**Macintosh computer running AudioDesk or Digital Performer**

USB or serial cable (bi-directional MIDI connection) bearing MMC transport commands from AudioDesk or Digital Performer to the MIDI Timepiece AV (or other synchronizer).

Sync Out

Sync In

Sync Out

Sync In

Sync Out

Sync In

Sync Out

Digital Timepiece, MIDI Timepiece AV, Alesis BRC or any other MMC-compatible ADAT synchronizer

To set the MOTU 828 hardware clock source for sample-accurate sync:

1. Choose MOTU Audio System>Configure Hardware Driver from the Basics menu in AudioDesk or Digital Performer, or run the MOTU 828 Control Panel.
2. Choose ADAT 9-pin from the Clock Source menu as shown to above.
3. Make sure the Sample Rate setting matches the tape decks and synchronizer.

AudioDesk automatically scans the DTP or MTP AV for ADATs, and they appear here. Just make sure you have the DTP or MTP AV in your FreeMIDI setup.

In AudioDesk or Digital Performer, turn on MIDI Machine Control by pressing this button (to make the arrow black). This brings on line all the tape decks connected to the DTP or MTP AV.

The above is also true for any version of Digital Performer later than 2.42. (The MOTU 828 requires Version 2.42 or higher.)

For sample-accurate sync settings in Cubase VST, see “Sample-accurate sync to ADAT” on page 57.
ADAT SYNC WITH NO SYNCHRONIZER

Even if you don't have an ADAT synchronizer, you can achieve sample-accurate sync between ADATs, the MOTU 828, and any sample-accurate software (such as AudioDesk or Digital Performer). Just connect the MOTU 828 to the end of the ADAT sync chain as shown below. But without the synchronizer, you don't get transport control from your computer, nor can you slave the system to external SMPTE time code. Instead, you have to play, stop, rewind and cue the system from the transports on your ADAT (or via an Alesis LRC). If you will be using the ADAT for its analog inputs and outputs only (you won’t be using any tapes in the ADAT), treat it as an ‘optical’ device. See “Syncing optical devices” on page 25.

What this setup provides

- ✔ Sample-accurate locating between all ADATs, the MOTU 828, and AudioDesk or Digital Performer.
- ✗ No transport control of everything from the computer
- ✗ No continuous sync to SMPTE time code and other sources

In AudioDesk or Digital Performer:

1. Choose “Receive Sync” from the Basics menu.
2. Choose the “Sample-accurate” option shown to the left.
3. To set the MOTU 828 hardware clock source for sample-accurate sync:
   1. Choose “MOTU Audio System>Configure Hardware Driver” from the Basics menu in AudioDesk or Digital Performer, or run the MOTU 828 Control Panel.
   2. Choose “ADAT 9-pin” from the Clock Source menu as shown to above.
   3. Make sure the Sample Rate setting matches the tape decks and synchronizer.

In AudioDesk or Digital Performer:

1. Make sure that “Slave to External Sync” is checked in the Basics menu.
2. Click the play or record button. The software will then wait for you to start your ADAT.
3. Press the Play button on the front panel of your ADAT to initiate playback or recording.

For sample-accurate sync settings in Cubase VST, see “Sample-accurate sync to ADAT” on page 57.

Figure 3-11: Sample-accurate sync between AudioDesk or Digital Performer and one or more ADATs — without an ADAT synchronizer.
SYNC TO SMPTE, WORD CLOCK, VIDEO

To synchronize (continuously resolve) the MOTU 828 with SMPTE time code, word clock, video or blackburst, you will need a MOTU Digital Timepiece, MIDI Timepiece AV or any other universal synchronizer equipped with ADAT sync. The synchronizer resolves continuously to the chosen time base, and the MOTU 828 slaves to the synchronizer via ADAT Sync. In addition, the audio software running on the computer slaves to MIDI Time Code generated by the synchronizer. How accurate will transfers be between your audio software and other audio devices? As good as the resolution of MIDI time code, which — at 30 fps — provides quarter frame resolution of 120th of a second (367 samples at 44.1 KHz). But if you are running your synchronizer under its own internal clock (triggering it via MMC from your software), you will probably get even tighter timing than that — perhaps as good as ±50 samples.

What this setup provides

✗ No sample-accurate locating
✓ Timing accuracy that is at least as good as MIDI time code (quarter-frame)— and maybe even tighter
✗ No transport control of from the computer
✓ Continuous sync to SMPTE time code and other sync sources (the other source is the transport master in this case)

![Diagram of MOTU 828 hardware setup](image)

Figure 3-12: Resolving the MOTU 828 to an external time base, such as SMPTE time code, word clock, or video. In this example, an S-VHS video deck is supplying SMPTE time code (address) and video (as the time base). For examples of other sources, consult the MIDI Timepiece AV manual (or other synchronizer).
SYNCING OPTICAL DEVICES

The word optical is our short-hand way of referring to any device that connects to the MOTU 828 via an optical cable. But we make a further distinction: an optical device is also one that doesn’t care about sample location. An example is a digital mixer.

Since a digital mixer is not a recording device, it has no sense of sample location like an ADAT does. An ADAT can cue to a specific sample number (e.g. sample number 43,478, 103) — as can any device that supports ADAT sync, but most digital mixers simply mix and process audio digitally, with no sense of a specific sample location. There are many other devices that fall into this category, including digital effects processors, synthesizers, A/D converters, and many more.

For ADATs or other devices that support ADAT sync, synchronize them with the MOTU 828 as described in the previous sections of this chapter.

For optical devices, such as digital mixers, all you have to do is make sure that their digital audio clock is phase-locked (in sync with) the MOTU 828. There are three ways to do this:

- Slave the optical device to the MOTU 828
- Slave the MOTU 828 to the optical device
- Slave both the optical device and the MOTU 828 to a third master clock (such as a Digital Timepiece or MIDI Timepiece AV synchronizer)

Don’t use any of these setups for an ADAT or other device that records. Instead, see “Sample-accurate sync with ADATs” on page 22.

Figure 3-13: Three setups for synchronizing an optical device with the MOTU 828. You can slave the optical device to the MOTU 828 or vice versa with their optical connections. For more elaborate setups, you can slave both to a digital audio synchronizer like the Digital Timepiece. Don’t use any of these setups for an ADAT or other device that records. Instead, see “Sample-accurate sync with ADATs” on page 22.
SYNCING S/PDIF DEVICES

DAT decks and other S/PDIF devices will sync to the MOTU 828 in one of two ways:

- Via the S/PDIF connection itself
- Via word clock

S/PDIF devices with no word clock

If your DAT deck or other S/PDIF device has no word clock sync connectors, just connect it to the MOTU 828 via the S/PDIF connectors. When the device records S/PDIF audio (from the MOTU 828), it will simply synchronize to the clock provided by the audio input.

On the other hand, when you transfer audio from the S/PDIF device into the MOTU 828, you’ll have to slave the MOTU 828 to its S/PDIF input. If you have other digital audio devices connected to the MOTU 828, and they are not slaved directly to the MOTU 828 itself, you may hear clicks and pops resulting from their unsynchronized audio clock. If so, just turn them off during the transfer.

S/PDIF devices with word clock

If your S/PDIF device has a Word Clock input, slave both the S/PDIF device and the MOTU 828 to a MOTU MIDI Timepiece AV (or other synchronizer). You can then freely transfer audio between the MOTU 828 and the S/PDIF device.

---

**Figure 3-14:** Two setups for synchronizing an S/PDIF device with the MOTU 828. In the top diagram, sync is achieved via the S/PDIF connection itself. In this case, you have to choose S/PDIF as the MOTU 828’s clock source when recording from the S/PDIF device. If you don’t want to have to worry about switching the Clock Source setting depending on the direction of the S/PDIF transfer, you can slave the S/PDIF device to word clock from the MOTU 828 or vice versa (not shown). The Word Clock connection maintains sync, regardless of the direction of the transfer.
SYNCING LARGE SYSTEMS
If you are connecting the MOTU 828 to a lot of other digital audio gear, get a Digital Timepiece. It can synchronize a wide variety of devices, and it offers sample accurate synchronization for devices that support it, such as ADATs. You will also be able to control everything from the transport controls of your audio software. If you have even more devices than a single Digital Timepiece can support, consider a word clock distribution device, such as the Aardvark Aard Sync™ video-to-word clock converter. Products like this offer multiple word clock outputs and an extremely low-jitter clock.
## Chapter 4  Installing the MOTU 828 Macintosh Software

### Overview

The MOTU 828 ships with the following software components:

<table>
<thead>
<tr>
<th>Software Component</th>
<th>Location</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>MOTU 828 Driver</td>
<td>Extensions Folder</td>
<td>Allow the MOTU 828 to establish communication with the computer.</td>

AudioDesk workstation software . . . . . . . . . . . . . . 31
ASIO MOTU 828 Driver . . . . . . . . . . . . . . . . . . . . . . 31
RUNNING THE MOTU 828 SOFTWARE INSTALLER
Insert the Macintosh and Windows compatible installer CD-ROM into your Macintosh and run the MOTU Audio/AudioDesk installer on the CD. It will guide you through the installation. If you are unsure about what components to install, refer to the rest of the sections in this chapter, which explain the purpose of each software item.

MOTU 828 DRIVER AND ENABLER
These two MacOS System Extensions allow the MOTU 828 to communicate with the computer. They must always be enabled in your extension set, along with any MacOS FireWire system extensions.

MOTU FOLDER
The MOTU Folder goes in the Extensions Folder inside the System Folder on the Macintosh startup disk.

The MOTU Folder contains the hard disk recording engine for AudioDesk and Digital Performer. It also holds the real-time effects processing plug-ins used by AudioDesk and Digital Performer.

MOTU 828 CONTROL PANEL
The MOTU 828 Control Panel is placed by the installer in your Mac's Apple menu (under Control Panels). It gives you access to all of the settings in the MOTU 828 hardware, such as the sample rate. For complete details, see chapter 5, “MOTU 828 Control Panel” (page 33).

MOTU 828 CONTROL STRIP MODULE
The MOTU 828 Control Strip module is placed by the installer in your Mac's Control Strip. Just like the MOTU 828 Control Panel, it gives you access to all of the settings in the MOTU 828 hardware. For complete details, see chapter 5, “MOTU 828 Control Panel” (page 33).
AUDIODESK WORKSTATION SOFTWARE

The MOTU 828 installer places AudioDesk on the top level of your Macintosh’s startup volume.

AudioDesk is an advanced workstation software package for the MOTU 828 that lets you record, edit, mix, process, bounce and master multi-track digital audio recording projects. Advanced features include real-time 32-bit effects processing, sample-accurate synchronization with ADATs, 24-bit recording, and much more.

See the AudioDesk manual included with your MOTU 828 system for details.

ASIO MOTU 828 DRIVER

ASIO stands for Audio Streaming Input and Output. The ASIO MOTU 828 driver allows MOTU 828 to provide multi-channel input and output for Steinberg’s Cubase VST software, or any other audio application that supports ASIO drivers.

The ASIO MOTU 828 driver is only required if you are using Cubase VST (or another audio program that relies on the ASIO driver to support multi-channel I/O with the MOTU 828).

Digital Performer and AudioDesk support ASIO, but they also access the MOTU 828 directly through the MOTU Audio System, so it is not necessary to use the ASIO driver with these MOTU applications.

The ASIO MOTU 828 driver should be placed in the ASIO folder of Cubase VST or other ASIO-compliant software that you are running as the software “front end” for the MOTU 828.

For details about using Cubase VST with the MOTU 828, see chapter 8, “The MOTU 828 and Other Audio Software” (page 53).
CHAPTER 5  MOTU 828 Control Panel

OVERVIEW
The MOTU 828 Control Panel provides access to all MOTU 828 settings. These settings can also be accessed from the MOTU 828 Control Strip module or from the Configure Hardware Driver command in AudioDesk or Digital Performer (Basics menu).

Accessing the MOTU 828 settings . . . . . . . . . . . .33
MOTU 828 Settings ...................................(34

Monitoring live input ............................... 38
If MOTU 828 settings are grayed out ............39

ACCESSING THE MOTU 828 SETTINGS
There are several ways to access the MOTU 828 Control Panel settings:

■ From the Apple menu, choose the MOTU 828 Control Panel
■ From the MacOS control strip, click on the MOTU 828 Control Strip Module

■ From within AudioDesk™ or Digital Performer™, choose Basics menu>MOTU Audio System options>Configure Hardware Driver

■ From within Cubase (Version 5 or higher), click the ASIO Control Panel button in the System Setup dialog as shown in Figure 8-3 on page 55.

■ From within other ASIO-compatible programs, refer to their documentation.

It doesn't matter which way you access the MOTU 828 settings. They are the same in all three places.
MOTU 828 SETTINGS

Sample Rate
Choose the desired Sample Rate for recording and playback. The MOTU 828 can operate at either 44.1 KHz (the standard rate for compact disc audio) or 48 KHz. Make absolutely sure that all of the devices connected digitally to the MOTU 828 match the MOTU 828's sample rate. Also make sure that your Digital Timepiece, MIDI Timepiece AV or other digital audio synchronizer matches it as well.

Mismatched sample rates cause distortion and crackling. If you hear this sort of thing, check the sample rate settings in your hardware and here in the MOTU 828 Control Panel.

Clock Source
The Clock Source determines the digital audio clock that the MOTU 828 will use as its time base. For a complete explanation of synchronization issues, see “Making sync connections” on page 19. The following sections briefly discuss each clock source setting.

Internal
Use the Internal setting when you want the MOTU 828 to operate under its own digital audio clock. For example, you may be in a situation where all you are doing is playing tracks off hard disk in your digital audio software on the computer. In a situation like this, you most often don't need to reference an external clock of any kind.

Another example is transferring a mix to DAT. You can operate the MOTU 828 system on its internal clock, and then slave the DAT deck to the MOTU 828 via the S/PDIF connection (usually DAT decks slave to their S/PDIF input when you choose the S/PDIF input as their record source).

If you would like help determining if this is the proper clock setting for your situation, see “Do you need a synchronizer?” on page 20.

With ADAT devices, however, you usually want an external digital audio synchronizer, such as the MIDI Timepiece AV or Digital Timepiece, to be the digital clock master. In this case, you would set the MOTU 828 clock source setting to ADAT 9-pin, as described below.

ADAT 9-pin
The ADAT 9-pin clock source setting refers to the ADAT digital audio synchronization format. It allows the MOTU 828 to slave to an ADAT — or ADAT sync chain — via its ADAT sync 9-pin connector. ADAT sync also carries precise, sample location information, which allows AudioDesk and Digital Performer to transfer audio to and from ADATs without drifting by as much as one sample.

Use this setting when you are using the MOTU 828 with one or more ADATs. Make sure the MOTU 828 is connected to the end of the ADAT sync chain.
You should also use this setting if you have a MIDI Timepiece A/V, which allows you to drive your entire system from the transport controls of AudioDesk, Digital Performer or other computer software.

ADAT sync also allows you to continuously resolve the MOTU 828 to SMPTE time code, video, and word clock via a synchronizer like the MOTU MIDI Timepiece A/V.

For further details, see “Sample-accurate sync with ADATs” on page 22, “ADAT sync with no synchronizer” on page 23 and “Sync to SMPTE, word clock, video” on page 24.

**ADAT optical**

The ADAT optical clock source setting refers to the clock provided by the MOTU 828’s optical input, when it is connected to an ADAT optical device. This setting can be used to slave the MOTU 828 directly to the optical input connection. Most of the time, you can set up a better operating scenario that uses one of the other synchronization options. However, there may be occasions when you have an ADAT optical compatible device that has no way of synchronizing digitally to the MOTU 828 or an external synchronizer such as the Digital Timepiece. In this case, the ADAT Optical clock source setting lets you slave the MOTU 828 to the device itself via its digital input to the MOTU 828.

If the ADAT Optical setting does not appear in the menu, it means that the MOTU 828’s optical input is currently either turned off or set to the TOSLink format. In either case, choose the ADAT optical format from the Optical input menu (Figure 5-1 on page 34).

This setting is also useful if you just need to make a simple, click-free digital transfer between the MOTU 828 and another device — where a time code reference and shared transport control are not needed — without having to set up an elaborate synchronization scenario.

For further details about this setting, see “Syncing optical devices” on page 25.

**TOSLink**

The TOSLink clock source setting refers to the clock provided an optical S/PDIF device connected to the MOTU 828’s optical input. This setting can be used to slave the MOTU 828 directly to the optical input connection. Most of the time, you can set up a better operating scenario that uses one of the other synchronization options. However, there may be occasions when you have an TOSLink-compatible device that has no way of synchronizing digitally to the MOTU 828 or an external synchronizer such as the Digital Timepiece. In this case, the TOSLink clock source setting lets you slave the MOTU 828 to the other device via the MOTU 828’s optical input.

If the TOSLink setting does not appear in the menu, it means that the MOTU 828’s optical input is currently either turned off or set to the ADAT optical format. In either case, choose the TOSLink format from the Optical input menu (Figure 5-1 on page 34).

This setting is also useful if you just need to make a simple, click-free digital transfer between the MOTU 828 and another device — where a time code reference and shared transport control are not needed — without having to set up an elaborate synchronization scenario.

For further details about this setting, see “Syncing optical devices” on page 25.
S/PDIF
The S/PDIF clock source setting refers to the S/PDIF RCA input connector on the MOTU 828. This setting allows the MOTU 828 to slave to another S/PDIF device.

Use this setting whenever you are recording input from a DAT deck or other S/PDIF device into the MOTU 828. It is not necessary in the opposite direction (when you are transferring from the MOTU 828 to the DAT machine).

If the S/PDIF setting does not appear in the menu, it means that the MOTU 828's optical input is currently set to TOSLink. To make it appear again, either disable the Optical input or switch it to the ADAT optical format (Figure 5-1 on page 34).

For further details about this setting, see “Syncing S/PDIF devices” on page 26.

Samples Per Buffer
A sample buffer is a small part of computer memory that briefly holds digital audio samples as they are passed between the computer and the MOTU 828.

The Samples Per Buffer setting lets you control the size of these buffers in the MOTU 828 driver. A higher setting reduces the processing load on your computer; a lower setting reduces monitoring latency, which is the slight delay you hear when patching live audio through the MOTU 828 and your audio software. (See “Monitoring live input” on page 38 for further explanation.) For example, you might want to listen to the vocals you are recording with a little bit of reverb on them from a plug-in in your audio software. The signal that gets recorded to disk is ‘dry’, but the signal in your headphones is ‘wet’. Since the vocal material recorded to disk is dry, you then have the flexibility to apply real-time reverb to the track after recording and change it at any time (since the reverb is not ‘printed’ in the track). You can even automate changes to plug-in effects over time (if your software supports plug-in automation).

A Samples Per Buffer setting of 512 produces a round-trip delay (monitoring latency) of approximately 23 milliseconds (ms). A setting of 256 produces monitoring latency of around 12-13 ms, and the delay starts to become inaudible.

Monitoring latency has no effect on recording
It is important to note that monitoring latency only applies to the live signal as it is being monitored. It has no effect whatsoever on the timing accuracy of the material being recorded to hard disk. The system is precisely calibrated to record and play back hard disk audio perfectly on time.

Choosing the right ‘Samples per buffer’ setting
If you would like to process live inputs with plug-in effects in your software (such as putting a reverb plug-in on a vocal mic input or a guitar amp simulation plug-in on your guitar signal), make the Samples Per Buffer setting as low as possible. How low you can go depends on how fast your computer is and how much plug-in processing (and other processor-intensive tasks) you are using in your recording project. Try settings below 512 and if your computer begins to act sluggish, try raising them again to the next highest buffer setting until the computer feels responsive. If your computer doesn’t allow you to go low enough, try cueMix™ Plus monitoring (“Monitor input — CueMix™ Plus” below) and then apply plug-in processing to the disk track after it has been recorded.

Changing the ‘Samples Per Buffer’ setting
If you are at a point in your recording project where you are not currently working with live, patched-thru material (e.g. you’re not recording vocals), switch to a higher Samples Per Buffer setting. Depending on your computer’s CPU speed, you might find that settings in the middle work best and that your computer is much more responsive.
**CueMix™ Plus monitoring**
The MOTU 828's CueMix™ Plus no-latency monitoring feature completely eliminates monitoring latency. For further information, see “Monitoring live input” on page 38.

**Optical input/output**
The Optical input and Optical output settings let you choose between ADAT optical ('lightpipe') and S/PDIF optical ('TOSLink') as the format for the MOTU 828's optical input and output. Choose the format that matches the device connected. If you are not using the optical connections, it is recommended that you turn them off (as provided in the menus) to reduce bandwidth and processing overhead. Note that you can operate the input and output independently. For example, you could use the ADAT optical format on the input (with a digital mixer, for example) and optical S/PDIF on the output (with a DAT deck, for example).

**Monitor input — CueMix™ Plus**
The Monitor input settings enables the MOTU 828 CueMix™ Plus feature (Figure 5-3 on page 39), which lets you route a single analog input or input pair directly to the MOTU 828 main outs, where it is mixed with the signal on the main outs. Routing occurs with virtually no monitoring latency (audible delay), and the signal is passed through dry (with no signal processing of any kind). In addition, the CueMix Plus signal volume can be controlled (relative to the main mix volume) with the Monitor knob on the MOTU 828 front panel. For information about other ways to handle input monitoring, see “Monitoring live input” on page 38.

**Enable Sound Manager driver**
Check the Enable Sound Manager option if you would like to route Sound Manager audio to and from the MOTU 828. For example, you could listen to an audio CD playing in the CD drive of your Macintosh through headphones connected to the MOTU 828. As another example, you could route audio from a pair of MOTU 828 inputs into a third-party Sound Manager-compatible audio application. Use the menus provided to choose the desired MOTU 828 inputs and outputs you would like to route to/from Sound Manager. For further details, see chapter 9, “Sound Manager” (page 59).

**Enable Pedal**
Check the Enable Pedal option if a foot switch is connected to the MOTU 828 and you would like to trigger recording punch in/out (or other software functions) with it. Use the Set buttons to determine what keystroke is trigger by the pedal-up and pedal-down positions. You can assign the pedal to any two keystrokes you wish. (You are not restricted to punch in/out.)
MONITORING LIVE INPUT

There are two ways to monitor live audio input with the MOTU 828: 1) through the computer or 2) via CueMix™ Plus hardware monitoring. Figure 5-2 below shows method 1, which allows you to add effects processing such as reverb and guitar amp effects via plug-ins in your audio software. See “Samples Per Buffer” on page 36 for details about how to reduce — and possibly eliminate — the audible monitoring delay that the computer introduces.

Figure 5-3 shows how to use CueMix™ Plus hardware-based monitoring, which lets you hear what you are recording with no monitoring delay and no computer-based effects processing. (You can add effects later, after you’ve recorded the live input as a disk track.) To learn more, see “Monitor input — CueMix™ Plus” on page 37.

If the material you are recording is suitable, there is a third way to monitor live input: use both methods (Figure 5-2 and Figure 5-3) at the same time. For example, you could route vocals to both the computer (for a bit of reverb) and mix that processed signal on the main outs with dry vocals from CueMix Plus.

Figure 5-2: There are two ways to monitor live audio inputs with the MOTU 828: 1) through the computer or 2) via CueMix™ Plus hardware monitoring. This diagram shows method 1 (through the computer). When using this method, use the MOTU 828’s ‘Samples Per Buffer’ setting to reduce the slight delay you hear when monitoring the live input, but don’t lower it too much, or your computer will act sluggish.
IF MOTU 828 SETTINGS ARE GRAYED OUT

If the MOTU 828 FireWire driver is currently in use by an audio program (or Sound Manager), some of its settings cannot be changed and are therefore grayed out in the MOTU 828 Control Panel menus. (Settings that cannot be changed are ones on which audio applications continuously depend for smooth, error free operation.) If you find that a MOTU 828 Control Panel setting that you wish to change is grayed out, simply quit all MOTU 828-compatible audio programs (which may include Sound Manager-compatible programs, too, if you are using the MOTU 828 with Sound Manager). Once you have quite all applications, all MOTU 828 Control Panel settings will be available (not grayed out).

Figure 5-3: This diagram shows the signal flow when using CueMix™ Plus no-latency monitoring. Notice that this method does not allow you to process the live input with plug-ins in your audio software while it is being monitored. You can, however, add effects later — after recording the live input as a disk track. CueMix™ Plus lets you hear what you are recording with no delay and no computer-based effects.
CHAPTER 6  The MOTU 828 and Digital Performer

OVERVIEW
This chapter provides a brief overview of Digital Performer’s basic I/O and synchronization operation with the MOTU 828 hardware. Digital Performer Version 2.42 or higher is required for the MOTU 828. Version 2.42 supports all of the advanced features of the MOTU 828, including sample-accurate synchronization with ADATs.

SETTING UP YOUR SYSTEM
As described in chapter 4, “Installing the MOTU 828 Macintosh Software” (page 29), the Digital Performer and MOTU 828/AudioDesk software installers will properly install and update everything for you.

If you are using a MIDI Timepiece AV or Digital Timepiece for synchronization, be sure they are present in your FreeMIDI setup.

THE MOTU 828 SETTINGS
The MOTU 828 settings can be accessed by choosing MOTU Audio System options>Configure Hardware Driver from the Basics menu. If you don't see the MOTU 828 settings as shown below in Figure 6-1, choose MOTU 828 from the menu at the top of the Configure Hardware dialog. For complete details about the important settings in this window, see chapter 5, “MOTU 828 Control Panel” (page 33).

The following sections provide a brief explanation of each MOTU 828 setting for use with Digital Performer. For a more complete overview, see chapter 5, “MOTU 828 Control Panel” (page 33).
Clock Source
This setting is very important because it determines which audio clock the MOTU 828 system will follow.

If you do not have any digital audio connections to your MOTU 828 (you are using the analog inputs and outputs only), and you will not be slaving Digital Performer to external SMPTE time code, choose Internal.

If you are slaving the MOTU 828 to the ADAT sync Input connector, choose ADAT 9-pin.

If you have digital audio devices connected to the MOTU 828, or if you are not sure about the clock source of your setup, be sure to read “Making sync connections” on page 19 and “Clock Source” on page 34.

Samples Per Buffer
The Samples Per Buffer setting can be used to reduce the delay — or monitoring latency — that you hear when live audio is patched through your MOTU 828 hardware and Digital Performer. For example, you might have MIDI instruments, samplers, microphones, and so on connected to the analog inputs of the MOTU 828. If so, you will often be mixing their live input with audio material recorded in Digital Performer.

Smaller Samples Per Buffer settings reduce latency, but they also put more demand on your computer’s processor (as shown in the Performance Monitor window). For best results, try 256 samples or lower, which reduces latency enough to be inaudible for most audio material. If Digital Performer gets sluggish, try the next higher setting until the computer feels responsive enough to you. Keep an eye on the Processor meter in the Performance monitor when making this adjustment. Be sure to try playing some audio, too, as the processor meter can jump up significantly during playback at lower settings. You can also use Cue Mix Plus no-latency
monitoring as described in “Monitoring live input” on page 38 and “Monitor input — CueMix™ Plus” on page 37.

Figure 6-2: When adjusting the 'Samples Per Buffer' to reduce monitoring latency, watch the 'processor' meter in the Performance Monitor. If you hear distortion, or if the Performance meter is peaking, try raising the Samples Per Buffer setting.

**Optical input and output**

To make a MOTU 828 optical input or output available in Digital Performer, choose the appropriate format (ADAT optical or TOSLink) from the optical input and/or output menu. If you won't be using the optical connectors, turn them off.

**Auto Monitor**

The Auto Monitor option (Figure 6-1 on page 42) automatically changes the MOTU 828 CueMix™ Plus monitor input when you record-enable a track in Digital Performer whose output assignment is Analog 1-2. For example, if you record-enabled a track called guitar in your Digital Performer project, its audio output assignment is Analog 1-2, and its audio input assignment is analog 2, the MOTU 828 CueMix Plus Monitor Input setting (see “Monitor input — CueMix™ Plus” on page 37) will automatically be changed to analog input #2.

The Monitor Input option requires the following additional settings shown below in Figure 6-3:

1. From the Basics menu, choose MOTU Audio System options>Input Monitoring Mode.

2. Choose the Direct hardware playthrough option.

3. In the Audio Monitor window, turn on Audio Patch thru by enabling the headphone button shown below.

Figure 6-3: To enable the CueMix™ Plus Auto Monitor feature in AudioDesk or Digital Performer, be sure the 'Direct hardware playthrough' option is chosen, and be sure audio patch thru is turned on.

☛ Remember: the Auto Monitor feature only responds to tracks whose output setting is Analog 1-2 (since the MOTU 828 CueMix Plus feature sends audio only to the main outputs).

**Auto Monitor playthrough is ‘dry’**

As you can see in Figure 6-3 above, there are two ways to monitor live audio input in Digital Performer: 1) directly through the audio hardware (the MOTU 828 only) or 2) through Digital Performer's virtual mixing environment, which may include real-time plug-in effects processing on the live input signal. The Auto Monitor option discussed in the previous section requires method 1, and therefore does not allow plug-in effects processing. You can, however, employ both types of monitoring at the same time (both ‘dry’ hardware monitoring and ‘wet’ monitoring through Digital Performer) by choosing the Monitor record-enabled tracks through effects option shown in Figure 6-3 above and then manually choosing a Monitor Input in the MOTU 828 Control Panel (as discussed in “Monitor input — CueMix™ Plus” on page 37). For further information about monitoring live input, see “Monitoring live input” on page 38.
BE SURE YOU HAVE ENOUGH VOICES
Go to the Basics menu and choose MOTU Audio System Options>Configure Studio Size. Then check to make sure you have enough mono and stereo audio voices for the work you need to do. Consult the MOTU Audio System chapter in your Digital Performer manual for further information about the settings in this dialog.

TRIMMING THE ANALOG INPUTS
The MOTU 828 analog inputs provide trim knobs on the front panel. Each knob provides up to 40dB of input gain. To calibrate an audio input:

1. Record-enable a track in Digital Performer.
2. Choose the desired MOTU 828 input for the track.
3. Open the Audio Monitor window.
4. As you feed signal to the input, adjust the input’s corresponding trim knob on the front panel of the MOTU 828 until peaks in the level meter are as high as possible without clipping (hitting zero dB).

24-BIT OPERATION
Your MOTU 828 hardware fully supports Digital Performer’s 24-bit recording capabilities, including both analog and digital 24-bit recording. If you would like to record and play back 24-bit audio files, go to the Basics menu, choose MOTU Audio System Options>Configure Sample Format, and choose 24-bit recording as the sample format. This setting is saved with the Digital Performer project.

FINE-TUNING I/O TIMING
The MOTU 828 system has the ability to be sample accurate. This means that when you transfer audio between Digital Performer and an ADAT, for example, you can record the audio back and forth as many times as you want between them and it will remain exactly at its original sample location (unless you move it in Digital Performer, of course).

Occasionally, you may encounter a situation in which you observe a slight offset of one sample — or maybe a few — caused by inherent latencies in the devices you are using with the MOTU 828. Usually, these offsets will be consistent, and you can compensate for them in Digital Performer. To do so, choose MOTU Audio System Options>Fine-tune Audio I/O Timing from the Basics menu as shown in Figure 6-4.

SYNCHRONIZATION
Digital Performer can run under its own transport control or slave to an external sync source, such as SMPTE time code or ADAT sync (sample address).

Running DP under its own transport control
If you do not need to synchronize Digital Performer with time code or another recording device, such as a tape deck, just leave the Slave to External Sync command in the Basics menu unchecked.

However, even though Digital Performer is not slaving to external sync, you still need to be concerned with the synchronization of the MOTU 828’s digital audio clock with other devices connected to it digitally (if any). For example, if you have a digital mixer connected to the MOTU 828 via an ADAT optical lightpipe cable, you need to make sure that their audio clocks are phase-
locked. For details, see “Syncing optical devices” on page 25 and “Making sync connections” on page 19. If you don't have any digital audio devices connected to the MOTU 828, digital audio phase-lock does not apply to you.

**Slaving DP and the MOTU 828 to SMPTE time code**

If you need to slave Digital Performer and the MOTU 828 system to SMPTE time code, choose Receive Sync from the Basics menu and choose the MTC (MIDI Time Code) option. Then make sure that the Slave to External Sync command in the Basic menu is checked. To ensure that your audio tracks don't drift out of sync with your MIDI tracks — or time code, use a hardware synchronizer like the MIDI Timepiece AV or Digital Timepiece to slave the MOTU 828 hardware to the SMPTE (or MIDI Time) Code as well. An ADAT-compatible digital audio synchronizer like the MOTU MIDI Timepiece AV is required for drift-free SMPTE/MIDI time code sync. Make sure the MOTU 828 Clock Source setting (Figure 6-1 on page 42) is set to ADAT 9-pin and you'll need the synchronization setup shown in Figure 3-12 on page 24.

☛ If you have an ADAT or ADAT sync-compatible device, don't use SMPTE time code. Instead, use sample-accurate sync as described in the next section.

**Sample-accurate sync to ADAT**

Together, Digital Performer and the MOTU 828 system provide you with sample-accurate transfers with ADATs and any other devices that support standard ADAT sample address (ADAT Sync).

A sample-accurate transfer is one in which the original location of the audio is preserved in the transfer, down to the sample.

For details on how to set up sample-accurate sync, see “Sample-accurate sync” on page 21. Be sure to choose the Sample Accurate Sync option in Digital Performer's Receive Sync dialog (Basics menu), and make sure that the Slave to External Sync command is checked in the Basic menu, too.

To control the transports of everything together from Digital Performer, see the next section.

**MIDI MACHINE CONTROL (MMC)**

If you have ADATs and a MMC-compatible ADAT synchronizer like the MIDI Timepiece AV or Digital Timepiece, you can control everything from your computer screen with Digital Performer’s transport controls and cueing features (like Markers, the playback wiper, etc.).

See the MIDI Machine Control chapter in your MIDI Timepiece AV or Digital Timepiece manual for details on how to set this up.

**REDUCING DELAY WHEN MONITORING LIVE INPUTS**

If you have live audio inputs connected to the MOTU 828, such as MIDI synthesizers, samplers, microphones or other live instruments, you might hear a slight delay when their audio is being patched through your MOTU 828 hardware and Digital Performer. There are several ways to reduce — and eliminate — this audible monitoring delay. For details, see “Monitoring live input” on page 38.

**USING A FOOT SWITCH**

Use a foot switch connected to the MOTU 828 to trigger recording punch-in and punch-out, or any other feature in Digital Performer that is assigned to a computer keystroke. By default, the foot switch triggers the 3 key on the computer keypad (which toggles Digital Performer’s record button.) To trigger a different set of keystrokes with the foot switch, visit the MOTU 828 Control Panel. (See “Enable Pedal” on page 37.)
EXCHANGING PROJECTS WITH AUDIODESK
Digital Performer (Version 2.6 or later) can exchange files with AudioDesk 1.0. For example, you can transfer a file from Digital Performer to AudioDesk, and back again. Just use Save As in Digital Performer’s File menu and choose the AudioDesk file format. To open AudioDesk files in Digital Performer, just use the Open command. (No conversion is required beforehand in AudioDesk.)

If you have an earlier version of Digital Performer (2.5 or earlier), you can open your Digital Performer files in AudioDesk (with the Open command in the File menu), but Digital Performer 2.5 or earlier cannot open AudioDesk files.

SOUND MANAGER AND DIGITAL PERFORMER
Digital Performer includes a MOTU Audio System plug-in called AudioTap that allows you to route any Sound Manager audio into Digital Performer’s mixing environment. From there, you can route it to your MOTU 828 interface via any of Digital Performer’s extensive audio routing features. For details, consult your Digital Performer documentation.
OVERVIEW
This chapter provides a brief overview of AudioDesk's basic I/O and synchronization operation with the MOTU 828 hardware. For complete information about all of AudioDesk's powerful workstation features, see the AudioDesk manual included with your MOTU 828 system.

SETTING UP YOUR SYSTEM
As described in chapter 4, “Installing the MOTU 828 Macintosh Software” (page 29), the MOTU 828/AudioDesk software installer will properly install everything for you.

If you will be using AudioDesk's MIDI Machine Control (MMC) or MIDI Time Code sync features, FreeMIDI must be installed. (You can do this from the MOTU 828 installer CD.)

If you are using a MIDI Timepiece AV or Digital Timepiece for synchronization, be sure they are present in your FreeMIDI setup.

THE MOTU 828 SETTINGS
The MOTU 828 settings can be accessed by choosing MOTU Audio System options>Configure Hardware Driver from the Basics menu. If you don't see the MOTU 828 settings as shown below in Figure 7-1, choose MOTU 828 from the menu at the top of the Configure Hardware dialog. For complete details about the important settings in this window, see chapter 5, “MOTU 828 Control Panel” (page 33).

The following sections provide a brief explanation of each MOTU 828 setting for use with AudioDesk. For a more complete overview, see chapter 5, “MOTU 828 Control Panel” (page 33).
Figure 7-1: The ‘Configure Hardware Driver’ menu item produces the MOTU 828 settings shown above. This window provides all of the settings for your MOTU 828 hardware.

Sample rate
Choose either 44.1 or 48 KHz as the overall sample rate for the MOTU 828 and AudioDesk. Newly recorded audio in AudioDesk will have this sample rate. Imported audio or soundbites in existing files that do not match this sample rate will be displayed in the Soundbites window with a red ‘X’ on its move handle to indicate that it cannot be played.

Clock Source
This setting is very important because it determines which audio clock the MOTU 828 system will follow.

If you do not have any digital audio connections to your MOTU 828 (you are using the analog inputs and outputs only), and you will not be slaving AudioDesk to external SMPTE time code, choose Internal.

If you are slaving the MOTU 828 to the ADAT sync Input connector, choose ADAT 9-pin.

If you have digital audio devices connected to the MOTU 828, or if you are not sure about the clock source of your setup, be sure to read “Making sync connections” on page 19 and “Clock Source” on page 34.

Samples Per Buffer
The Samples Per Buffer setting can be used to reduce the delay — or monitoring latency — that you hear when live audio is patched through your MOTU 828 hardware and AudioDesk. For example, you might have MIDI instruments, samplers, microphones, and so on connected to the analog inputs of the MOTU 828. If so, you will often be mixing their live input with audio material recorded in AudioDesk.

Smaller Samples Per Buffer settings reduce latency, but they also put more demand on your computer’s processor (as shown in the Performance Monitor window). For best results, try 256 samples or lower, which reduces latency enough to be inaudible for most audio material. If AudioDesk gets sluggish, try the next higher setting until the computer feels responsive enough to you. Keep an eye on the Processor meter in the Performance monitor when making this adjustment. Be sure to try playing some audio, too, as the processor meter can jump up significantly during playback at lower settings. You can also use Cue Mix Plus no-latency monitoring as described in “Monitoring live input” on page 38 and “Monitor input — CueMix™ Plus” on page 37.
When adjusting the ‘Samples Per Buffer’ to reduce monitoring latency, watch the ‘processor’ meter in the Performance Monitor. If you hear distortion, or if the Performance meter is peaking, try raising the Samples Per Buffer setting.

Optical input and output
To make a MOTU 828 optical input or output available in AudioDesk, choose the appropriate format (ADAT optical or TOSLink) from the optical input and/or output menu. If you won’t be using the optical connectors, turn them off.

Auto Monitor
The Auto Monitor option (Figure 7-1 on page 48) automatically changes the MOTU 828 CueMix™ Plus monitor input when you record-enable a track in AudioDesk. For example, if you record-enabled a track called guitar in your AudioDesk project, its audio output assignment is Analog 1-2, and its audio input assignment is analog 2, the MOTU 828 CueMix Plus Monitor Input setting (see “Monitor input — CueMix™ Plus” on page 37) will automatically be changed to analog input #2.

The Monitor Input option requires the following additional settings shown below in Figure 7-3:

1. From the Basics menu, choose MOTU Audio System options>Input Monitoring Mode.
2. Choose the Direct hardware playthrough option.
3. In the Audio Monitor window, turn on Audio Patch thru by enabling the headphone button shown below.

Figure 7-2: When adjusting the ‘Samples Per Buffer’ to reduce monitoring latency, watch the ‘processor’ meter in the Performance Monitor. If you hear distortion, or if the Performance meter is peaking, try raising the Samples Per Buffer setting.

Figure 7-3: To enable the CueMix™ Plus Auto Monitor feature in AudioDesk or AudioDesk, be sure the ‘Direct hardware playthrough’ option is chosen, and be sure audio patch thru is turned on.

〉 Remember: the Auto Monitor feature only responds to tracks whose output setting is Analog 1-2 (since the MOTU 828 CueMix Plus feature sends audio only to the main outputs).

Auto Monitor playthrough is ‘dry’
As you can see in Figure 7-3 above, there are two ways to monitor live audio input in AudioDesk: 1) directly through the audio hardware (the MOTU 828 only) or 2) through AudioDesk’s virtual mixing environment, which may include real-time plug-in effects processing on the live input signal.

The Auto Monitor option discussed in the previous section requires method 1, and therefore does not allow plug-in effects processing. You can, however, employ both types of monitoring at the same time (both ‘dry’ hardware monitoring and ‘wet’ monitoring through AudioDesk) by choosing the Monitor record-enabled tracks through effects option shown in Figure 7-3 above and then manually choosing a Monitor Input in the MOTU 828 Control Panel (as discussed in “Monitor input — CueMix™ Plus” on page 37). For further information about monitoring live input, see “Monitoring live input” on page 38.
BE SURE YOU HAVE ENOUGH VOICES

Go to the Basics menu and choose MOTU Audio System Options>Configure Studio Size. Then check to make sure you have enough mono and stereo audio voices for the work you need to do. Consult the MOTU Audio System chapter in your AudioDesk manual for further information about the settings in this dialog.

TRIMMING THE ANALOG INPUTS

The MOTU 828 analog inputs provide trim knobs on the front panel. Each knob provides 40dB of input gain. To calibrate an audio input:

1. Record-enable a track in AudioDesk.
2. Choose the desired MOTU 828 input for the track.
3. Open the Audio Monitor window.
4. As you feed signal to the input, adjust the input's corresponding trim knob on the front panel of the MOTU 828 until peaks in the level meter are as high as possible without clipping (hitting zero dB).

24-BIT OPERATION

Your MOTU 828 hardware fully supports AudioDesk's 24-bit recording capabilities, including both analog and digital 24-bit recording. If you would like to record and play back 24-bit audio files, go to the Basics menu, choose MOTU Audio System options>Configure Sample Format, and choose 24-bit recording as the sample format. This setting is saved with the AudioDesk project.

FINE-TUNING I/O TIMING

The MOTU 828 system has the ability to be sample accurate. This means that when you transfer audio between AudioDesk and an ADAT, for example, you can record the audio back and forth as many times as you want between them and it will remain exactly at its original sample location (unless you move it in AudioDesk, of course).

Occasionally, you may encounter a situation in which you observe a slight offset of one sample — or maybe a few — caused by inherent latencies in the devices you are using with the MOTU 828. Usually, these offsets will be consistent, and you can compensate for them in AudioDesk. To do so, choose MOTU Audio System Options>Fine-tune Audio I/O Timing from the Basics menu as shown in Figure 7-4.

SYNCHRONIZATION

AudioDesk can run under its own transport control or slave to an external sync source, such as SMPTE time code or ADAT sync (sample address).

Running AudioDesk under its own transport control

If you do not need to synchronize AudioDesk with time code or another recording device, such as a tape deck, just leave the Slave to External Sync command in the Basics menu unchecked.

However, even though AudioDesk is not slaving to external sync, you still need to be concerned with the synchronization of the MOTU 828's digital audio clock with other devices connected to it digitally (if any). For example, if you have a digital mixer connected to the MOTU 828 via an ADAT optical lightpipe cable, you need to make sure that their audio clocks are phase-locked. For details, see “Syncing optical devices” on page 25 and “Making sync connections” on page 19. If you don’t have any digital audio devices connected to the MOTU 828, digital audio phase-lock does not apply to you.
Slaving AudioDesk and the MOTU 828 to SMPTE time code

If you need to slave AudioDesk and the MOTU 828 system to SMPTE time code, choose Receive Sync from the Basics menu and choose the MTC (MIDI Time Code) option. Then make sure that the Slave to External Sync command in the Basic menu is checked. To ensure that your audio tracks don't drift out of sync with the SMPTE time code, use a hardware synchronizer like the MIDI Timepiece AV or Digital Timepiece to slave the MOTU 828 hardware to the SMPTE (or MIDI Time) Code as well. An ADAT sync-compatible digital audio synchronizer is required for drift-free SMPTE/MIDI time code sync. Make sure the MOTU 828 Clock Source setting (Figure 7-1 on page 48) is set to ADAT 9-pin and you'll need the synchronization setup shown in Figure 3-12 on page 24.

☛ If you have an ADAT or ADAT sync-compatible device, don't use SMPTE time code. Instead, use sample-accurate sync as described in the next section.

Sample-accurate sync to ADAT or Control Track

Together, AudioDesk and the MOTU 828 system provide you with sample-accurate transfers with ADATs and any other devices that support standard ADAT sample address (ADAT Sync).

A sample-accurate transfer is one in which the original location of the audio is preserved in the transfer, down to the sample.

For details on how to set up sample-accurate sync, see “Sample-accurate sync” on page 21. Be sure to choose the Sample Accurate Sync option in AudioDesk's Receive Sync dialog (Basics menu), and make sure that the Slave to External Sync command is checked in the Basic menu, too.

To control the transports of everything together from AudioDesk, see the next section.

MIDI MACHINE CONTROL (MMC)

If you have ADATs and a MMC-compatible ADAT synchronizer like the MIDI Timepiece AV or Digital Timepiece, you can control everything from your computer screen with AudioDesk's transport controls and cueing features (like Markers, the playback wiper, etc.)

See the MIDI Machine Control chapter in your MIDI Timepiece AV or Digital Timepiece manual for details on how to set this up.

REDUCING DELAY WHEN MONITORING LIVE INPUTS

If you have live audio inputs connected to the MOTU 828, such as MIDI synthesizers, samplers, microphones or other live instruments, you might hear a slight delay when their audio is being patched through your MOTU 828 hardware and AudioDesk. There are several ways to reduce — and eliminate — this audible monitoring delay. For details, see “Monitoring live input” on page 38.

USING A FOOT SWITCH

Use a foot switch connected to the MOTU 828 to trigger recording punch-in and punch-out, or any other feature in AudioDesk that is assigned to a computer keystroke. By default, the foot switch triggers the 3 key on the computer keypad (which toggles AudioDesk's record button.) To trigger a different set of keystrokes with the foot switch, visit the MOTU 828 Control Panel. (See “Enable Pedal” on page 37.)

EXCHANGING PROJECTS WITH DIGITAL PERFORMER

AudioDesk 1.0 can exchange files with Digital Performer (Version 2.6 or later). For example, you can transfer a file from Digital Performer to AudioDesk, and back again. Just use Save As in Digital Performer's File menu and choose the AudioDesk file format. To open AudioDesk files in
Digital Performer, just use the Open command.
(No conversion is required beforehand in AudioDesk.)

If you have an earlier version of Digital Performer (2.5 or earlier), you can open your Digital Performer files in AudioDesk (with the Open command in the File menu), but Digital Performer 2.5 or earlier cannot open AudioDesk files.

AUDIODESK AND MIDI SEQUENCING
AudioDesk can play audio as a background application, allowing you to run a sequencer at the same time in the foreground. However, there is no way to continuously synchronize — or resolve — a sequencer with AudioDesk, so the two programs will eventually drift out of sync, even if you manage to start them at the same time. If you’d like to do integrated MIDI sequencing, your best bet is Digital Performer, which offers pretty much all of the same features as AudioDesk, along with powerful, state-of-the-art MIDI sequencing. Talk to your authorized MOTU dealer for details about upgrading from AudioDesk to Digital Performer.
CHAPTER 8  The MOTU 828 and Other Audio Software

OVERVIEW
The MOTU 828 includes an ASIO driver that provides multi-channel I/O with any ASIO-compatible audio software.

ASIO driver support is required. .............. 53
Check your setup with AudioDesk first ....... 54
Check the MOTU 828 ASIO driver ............ 54
Check the MOTU 828 Control Panel .......... 54
Enable the MOTU 828 ASIO driver .......... 54
Number of audio channels ................... 55
Working with MOTU 828 inputs and outputs .. 55
Trimming the analog inputs ................. 56
Using a foot switch ........................... 56
Changing MOTU 828 settings ............... 56
Reducing delay when monitoring live inputs .. 56
Audio clock source .......................... 56
Synchronization .............................. 56
MIDI Machine Control (MMC) .............. 58
24-bit operation .............................. 58

ASIO DRIVER SUPPORT IS REQUIRED
ASIO is an acronym for Audio Streaming Input and Output. The ASIO MOTU 828 driver allows the MOTU 828 to provide multi-channel audio input and output for any audio application that supports ASIO drivers.

☞ For multi-channel operation with third-party audio software, the MOTU 828 requires ASIO compatibility. If your host audio program does not support ASIO, contact the developer.

Sample-accurate sync
The MOTU 828 ASIO driver supports sample-accurate sync (via the MOTU 828’s ADAT sync feature) for applications that support it.

Attention: Digital Performer users
Digital Performer supports ASIO, but it also accesses the MOTU 828 directly through the MOTU Audio System, so it is not necessary to use the ASIO driver with Digital Performer.

Attention: Cubase VST users
Cubase VST Version 5 is used for the examples in this chapter. However, there is no significant difference between the Version 5 examples shown and what you see in Version 4. The basic procedures are the same.

Attention: Other software users
Cubase VST is used for the examples in this chapter. However, the basic procedures are the same and can be easily applied to any ASIO-compatible software. Just follow the general descriptions at the beginning of each main section in this chapter. Consult your software documentation for details about each topic, if necessary.
CHECK YOUR SETUP WITH AUDIODESK FIRST
Before you run your third-party audio software with the MOTU 828, launch AudioDesk and play back the demo project to make sure that the MOTU 828 hardware and software drivers are set up properly. The AudioDesk demo project is located on the MOTU 828 Installer CD-ROM. Drag it to your hard drive before opening it in AudioDesk, as your CD-ROM drive probably will be too slow to play the audio.

CHECK THE MOTU 828 ASIO DRIVER
For Cubase and most other ASIO-compatible programs, the ASIO MOTU 828 driver should be placed in the ASIO folder of the ASIO-compliant software that you are running as the software “front end” for the MOTU 828. To check this quickly, use your computer’s search utility (Sherlock or other utility) and search using the word ASIO. Drag the ASIO MOTU 828 driver to the appropriate folder, if necessary. If you can’t find it, run the MOTU 828 installer again and do a Custom Install.

CHECK THE MOTU 828 CONTROL PANEL
Before you run your audio software, launch the MOTU 828 Control Panel to configure your MOTU 828 hardware. The MOTU 828 Control Panel lets you choose the audio clock source, and it lets you enable the optical input and output, if needed. For details, see chapter 5, “MOTU 828 Control Panel” (page 33).

ENABLE THE MOTU 828 ASIO DRIVER
Once you’ve made the preparations described so far in this chapter, you’re ready to run your audio software and enable the MOTU 828 driver. Check the audio system or audio hardware configuration window in your software. There will be a menu there that lets you choose among various ASIO drivers that may be in your system. Choose the MOTU 828 from this menu.

Enabling the MOTU 828 ASIO driver in Cubase
To activate the MOTU 828 ASIO driver in Cubase:

1. Choose System from the Audio menu.
2 Choose MOTU 828 from the ASIO device menu.

3 Make the other settings in the dialog as need for your system and synchronization scenario.

In Cubase, set the number of channels in the System dialog (as shown above in Figure 8-3).

WORKING WITH MOTU 828 INPUTS AND OUTPUTS

Once you've enabled the MOTU 828 ASIO driver in your host audio software, MOTU 828 audio inputs and outputs will appear in your software’s input/output menus, and you can set them up and use them as any standard audio input and output. If you don’t see the optical inputs and/or outputs, check the MOTU 828 Control Panel to make sure they are turned on and set to the format you require. If you don’t plan to use the optical input or output, turn it off to conserve computer bandwidth.

MOTU 828 inputs/outputs in Cubase

Once you've chosen the MOTU 828 driver in the Audio System dialog, choose Audio Inputs from the Audio menu to see the MOTU 828 inputs. To activate them, click the Active light next to each input. Once you've activated the MOTU 828 inputs, you can then assign them to Cubase audio channels in the Monitor window in the usual fashion (by command-clicking on the input button at the top of each channel strip). MOTU 828 outputs appear in the Master window as output assignments for the master fader and busses.

NUMBER OF AUDIO CHANNELS

Be sure to configure your audio software so that it has enough audio channels (or voices) to cover the 18 channels of input and output provided by the MOTU 828:

- 8 channels for analog I/O
- 2 channels for RCA S/PDIF
- Zero, 2 or 8 channels for optical, depending on whether you have optical turned off, or set to S/PDIF or ADAT optical

For example, if you are using analog only, you only need 8 channels. If you are using analog and RCA S/PDIF, you need 10 channels.

As another example, if you are using analog, RCA S/PDIF and ADAT optical, you need 18 channels (the maximum number of simultaneous channels provided by the MOTU 828).
Figure 8-4: Use the output buttons at the bottom of each channel strip to assign MOTU 828 outputs to buses. You can then assign channels in the Monitor window to each bus as desired.

TRIMMING THE ANALOG INPUTS
The MOTU 828 analog inputs provide trim knobs on the front panel. Each knob provides 40 dB of input gain. Use the level meters in your audio software to calibrate these inputs before recording. As you feed signal to the MOTU 828 analog input, adjust the input’s corresponding trim knob on the front panel of the MOTU 828 until peaks in your software’s level meter are as high as possible without clipping (hitting zero dB).

USING A FOOT SWITCH
Use a foot switch connected to the MOTU 828 to trigger recording punch-in and punch-out, or any other feature in your host audio software that is assigned to a computer keystroke. By default, the foot switch triggers the 3 key on the computer keypad. To trigger a different set of keystrokes with the foot switch, visit the MOTU 828 Control Panel. (See “Enable Pedal” on page 37.)

CHANGING MOTU 828 SETTINGS
You can change the MOTU 828 settings at any time by accessing either the MOTU 828 Control Panel or the Control Strip module. (See “Accessing the MOTU 828 settings” on page 33.) However, some settings are grayed out and cannot be changed when the MOTU 828 ASIO driver is active (when a program is currently using it). Therefore, you may need to quit your audio software to change the desired MOTU 828 setting.

REDUCING DELAY WHEN MONITORING LIVE INPUTS
If you have live audio inputs connected to the MOTU 828, such as MIDI synthesizers, samplers, microphones or other live instruments, you might hear a slight delay when their audio is being monitored through your MOTU 828 hardware and your host audio program. (In Cubase, this delay is displayed under Latency in the Audio System dialog shown in Figure 8-3.) There are several ways to reduce — and eliminate — this audible monitoring delay. For details, see “Monitoring live input” on page 38.

AUDIO CLOCK SOURCE
If you have devices connected to the MOTU 828 digital inputs (optical or RCA S/PDIF), or if you need to synchronize MOTU 828 digital audio and your host audio software to an external sync source, be sure the MOTU 828 clock source is set properly. For complete information, see “Making sync connections” on page 19 and “Clock Source” on page 34.

SYNCHRONIZATION
If your audio software has the ability to slave to SMPTE time code or perform sample-accurate digital audio transfers with Alesis ADAIIs, then it can take advantage of the synchronization features in the MOTU 828.

As you read through the following sections to decide what form of synchronization you might need with other devices in your studio, be sure to consult “Making sync connections” on page 19 for the proper hardware connections. Use the synchronization diagrams to be clear about how you will be synchronizing your audio software and the MOTU 828 to the other components of your system.
Synchronizing digital audio connections
If you have devices connected to the MOTU 828 digital inputs (optical or RCA S/PDIF), you need to be concerned with the synchronization of the MOTU 828’s digital audio clock with other devices connected to it digitally (if any). For example, if you have a digital mixer connected to the MOTU 828 via an ADA T optical lightpipe cable, you need to make sure that their audio clocks are phase-locked. For details, see “Syncing optical devices” on page 25 and “Making sync connections” on page 19. If you don’t have any digital audio devices connected to the MOTU 828, digital audio phase-lock does not apply to you.

Slaving to SMPTE time code
If you need to slave your audio software and the MOTU 828 system to SMPTE time code, follow the instructions in your software’s manual for slaving it to MIDI Time Code (MTC). To ensure that your audio tracks don’t drift out of sync with your MIDI tracks or the time code, use a hardware synchronizer like the MOTU MIDI Timepiece AV or Digital Timepiece to slave the MOTU 828 hardware to the SMPTE (or MIDI Time) Code as well. A digital audio synchronizer is required for drift-free SMPTE/MIDI time code sync. Make sure the Clock Source setting in the MOTU 828 Control Panel is set to ADA T 9-pin. For examples of how to set this up, see “Sync to SMPTE, word clock, video” on page 24.

Sample-accurate sync to ADAT
If your audio software supports sample-accurate synchronization, the MOTU 828 provides sample-accurate digital transfers between the computer and ADATs, or any other device that supports standard ADAT sample address (ADAT Sync).

A sample-accurate digital transfer is one in which the original location of the audio is preserved in the transfer, down to the sample.

For details on how to connect your hardware for sample-accurate sync, see “Sample-accurate sync” on page 21. For software setup, consult your audio software documentation.

Sample-accurate sync with Cubase
For sample-accurate sync in Cubase, set up Cubase as follows:

1. In Cubase’s MIDI System Setup window, set OMS compatibility to No OMS. VST does not appear to be able to achieve sample-accurate sync when running under OMS.

2. In Cubase’s Audio System Setup window (Audio menu), choose an Audio Clock Source setting of ADAT 9-pin.

3. In Cubase’s Synchronization window, set the Sync Source Time Base to ASIO 2.0 as shown below:

4. Enable SYNC in the Controls window.

5. Begin playback from the sample-accurate sync source (ADAT, etc.) Transport control is handled by the sample-accurate sync source.
The ASIO 2.0 MMC setting in Cubase

The Timecode Base menu shown above in Figure 8-5 includes a setting called ASIO 2.0 MMC, which provides sample-accurate transport control of the MOTU MIDI Timepiece AV (or other MMC-compatible synchronizer) from the transport buttons in Cubase itself.

MIDI MACHINE CONTROL (MMC)

If your audio software supports MIDI Machine Control (MMC), and you have ADATs and a MMC-compatible ADAT synchronizer like the MIDI Timepiece AV, you can control everything from the transport controls and cueing features in your audio software (like the playback wiper, etc.) See “Sample-accurate sync to ADAT” on page 57 for details on how to set this up.

24-BIT OPERATION

Your MOTU 828 hardware fully supports 24-bit recording in any audio software that supports it. Simply enable 24-bit operation as instructed by the software. The MOTU 828 system always supplies the software with a 24-bit data stream, and when you enable 24-bit operation, it simply uses all 24-bits supplied by the MOTU 828 hardware.
CHAPTER 9  Sound Manager

OVERVIEW
Sound Manager is a standard Mac OS System Extension that provides stereo sound capabilities on your Power Macintosh. The MOTU 828 system extensions support Sound Manager. This support allows your Power Macintosh to use any pair of inputs and outputs (analog or digital) on the MOTU 828, instead of the Mac's built-in audio inputs/outputs (if any).

SOUND MANAGER SUPPORTS 44.1KHZ ONLY
The MOTU 828 can run at either 44.1 kHz or 48 kHz. However, Sound Manager only supports 44.1 kHz (in OS8 and OS9 — future versions may support 48 kHz). Therefore, you must set the MOTU 828 to run at 44.1 kHz to use it with Sound Manager.

ENABLING SOUND MANAGER I/O
Use the MOTU 828 Control Panel or Control Strip to enable Sound Manager I/O and choose the inputs and outputs that you wish to use for Sound Manager I/O.

THE SOUND CONTROL PANEL
Set up the Sound control panel for the MOTU 828 as follows:

1. Open the Sound Control Panel.
2. Choose Alert Sounds from the menu.

USING 3RD PARTY AUDIO SOFTWARE
Just about every application for Macintosh that supports audio also supports Sound Manager. Once you've installed the MOTU 828 software, you can use any pair of MOTU 828 inputs and outputs (analog or digital) to record and play back audio from any Sound Manager compatible program.

SOUND MANAGER IS STEREO ONLY
Sound Manager currently only supports stereo input and output. Therefore, Sound Manager compatible programs can only record two channels at a time with your MOTU 828 hardware. Similarly, they can play back audio through one stereo output pair on the MOTU 828, although most multi-track audio applications can internally mix more than two tracks to stereo. Consult your software's documentation for details.

The Sound control panel displays the options for selecting inputs and outputs for Sound Manager I/O.
Figure 9-1: Lower the alert sound volume to avoid getting blasted by it through your MOTU 828 hardware.

3 Lower the Alert volume. This prevents the Macintosh alert sound from blurring out of the MOTU 828.

4 Choose Input from the menu and click MOTU 828.

Figure 9-2: Choosing the MOTU 828 for Sound Manager input. This allows any Sound Manager compatible software to receive audio from a MOTU 828 input (that you’ll choose later in this procedure).

5 Choose the desired MOTU 828 input source from the menu provided (as shown above in Figure 9-2).

6 Choose Output from the menu and click MOTU 828.

That’s it. You can now run any Sound Manager compatible audio software, and play back audio through the MOTU 828 outputs you’ve chosen in the MOTU 828 Control Panel.

CHANGING THE INPUTS OR OUTPUTS
Change the MOTU 828 inputs or outputs being used by Sound Manager in the MOTU 828 Control Panel or Control Strip module.

MONITORING LIVE INPUTS
If you would like to listen to live inputs as you are recording them into your Sound Manager application, you need to use the PCI-324’s CueMix™ Plus feature. For details, see “Monitor input — CueMix™ Plus” on page 37.

AUDIOTAP™ AND DIGITAL PERFORMER
Digital Performer includes a MOTU Audio System plug-in called AudioTap that allows you to route any Sound Manager audio into Digital Performer’s mixing environment. From there, you can route it to your MOTU 828 interface via any of Digital Performer’s extensive audio routing features. For details, consult your Digital Performer documentation.
CHAPTER 10  Troubleshooting

Using Pro Tools, Sound Manager and -50 error
When using Sound Manager, Pro Tools software
will only allow audio input via the Macintosh’s
Built-in hardware. Therefore, you cannot use the
MOTU 828 as the input device to Pro Tools
software. If the MOTU 828 driver is selected as the
input device in the Sound Control Panel, Pro Tools
will return a -50 error and not launch. You can,
however, select Built-in as the input device and the
MOTU 828 as the output device in the Sound
Control Panel. After doing so, you can run Pro
Tools and monitor your output through the MOTU
828.

Sample accurate sync in AudioDesk and Digital
Performer
When you first use sample accurate sync, be sure to
go to the Receive Sync dialog in Digital Performer
or AudioDesk and switch from “MTC” to “Sample-
accurate.”

Apple CD Player will not play through audio
interface
The Apple CD Player in OS 8.6 or earlier is
programmed to only output to the Built-in Sound
Manager hardware. The Apple CD Player in OS 9
and later is capable of playing audio to any Sound
Manager compatible audio hardware. There are
also several 3rd party CD audio applications
available that are capable of playing audio to any
Sound Manager compatible audio hardware.

Can’t authenticate AudioDesk
When installing software off the CD-ROM, the OK
button does not become active until you have
entered in your name and a valid keycode. Your
name must contain at least 3 characters, and you
must enter the keycode exactly as it appears in your
AudioDesk manual (on the inside of the back
cover).

MOTU 828 Control Panel or Control Strip module
settings are grayed out for no apparent reason
Some settings cannot be accessed while the MOTU
828 is active. Quit all audio software that uses the
MOTU 828 (including any Sound Manager
applications, if any), and then the MOTU 828
settings should no longer be grayed out.

ADAT-compatible tape decks - converting 48kHz
tracks to 44.1kHz
If the audio on your ADAT tape was recorded at
48kHz, then you must transfer that audio into your
host software at 48kHz. If you plan to digitally mix
this data and burn an audio CD, you must convert
your audio to 44.1kHz with your host software.
Once you sample rate convert your audio to
44.1kHz, you will have to set the sample rate in the
console back to 44100 so you can play the file. You
always want your digital clocks and sample rates to
match when dealing with any kind of digital audio
transfer or synchronizing.

Cubase - MOTU 828 inputs and outputs are not
visible in Cubase
You probably need to enable them in Cubase.

ADAT-compatible tape decks - device order in
MIDI Machine Control window
When powered on, most modular digital multi
tracks ‘wake up’ configured to record from their
analog inputs by default. You won’t be able to
record from the MOTU 828 to a MDM until it is
switched to digital input. Tip: configure this in
ClockWorks or AudioDesk if you want your decks
to come up in the right mode when powered on.
The order of devices in the DTP panel of the MIDI Machine Control window is not controlled by the order of connections to the MOTU 828. This can be confusing unless you make them match when connecting the system.

No input on an ADAT tape deck
If you are having trouble recording on your ADAT tape deck from the MOTU 828, check the Digital input setting. After power cycling, tape decks often come up configured to record from their analog inputs. You won’t be able to record from the MOTU 828 to a tape deck until it is switched to digital input. Tip: configure this in ClockWorks or AudioDesk if you want your decks to come up in the right mode when power cycled.

ADATs and the DTP - lock up time allowances
ADATs can take a while to sync to the DTP. For example, when recording from the MOTU 828 to the ADATs, they may appear to chase and lock, but the record button continues to flash. Recorded data on the tape won’t be sample accurate until the record light stops flashing. Solution: add more pre-roll time.

Alesis blackface (classic) ADAT optical sync
If you are using a Classic (black-faced) ADAT as a sync master in your MOTU 828 setup, and you want to record sample accurately into it, you must configure it to use its internal clock, instead of slaving to the optical input. To do this, hold down the SET LOCATE button and press the DIGITAL IN button. This will toggle the ADAT between external sync (shown as “diG”) and internal sync (“int”). Note that the ADAT will return to the “diG” setting each time it is powered off.

Alesis ADAT track offset
If you find that sample accurate transfers from an ADAT are displaced by a small amount, try to reset the ADAT to its factory default state. This is accomplished by powering on the ADAT while holding down the RECORD and PLAY keys simultaneously. The ADAT lx uses a ‘soft’ power key so lx users will have to unplug and plug the ADAT lx while holding down the RECORD and PLAY keys.

Clicks and pops under word clock sync
Many problems result from incorrect word clocking. It is essential that all digital devices in the system be word locked. Consult “Making sync connections” on page 19 for detailed information on how to word clock your gear. Whenever there is any weird noise or distortion, suspect incorrect word lock.

Clicks and pops under ADAT Sync
Sometimes, the ADAT sync cable seems to be plugged into the MOTU 828, and it partially works. But it isn’t really all the way in. This can cause clicks when slaved to ADAT 9-pin. Make sure the ADAT Sync cable plug is really seated firmly.

Clicks and pops due to hard drive problems
If you have checked your clock settings and you are still getting clicks and pops in your audio, you may have a drive related problem. Set your Clock Source to Internal and try recording just using the analog inputs and outputs of the MOTU 828. If you encounter the same artifacts you may want try using another drive in your computer. Clicks and pops can also occur when the drive is severely fragmented, the disk drivers are outdated, or if you are using a SCSI accelerator that is not optimally configured for working with audio.

Connecting or powering gear during operation
It is not recommended that you connect/disconnect, or power on/off devices connected to the MOTU 828 while recording or playing back audio. Doing so may cause a brief glitch in the audio.

No optical inputs or outputs are available in host audio application
Check to make sure you have the desired optical inputs and/or outputs enabled in the MOTU 828 Control Panel.
**Monitoring - How to monitor inputs?**  
Please refer to the documentation for the audio application that you are using. If your application does not support input monitoring, you will need to use the MOTU 828’s hardware-based CueMix Plus monitoring feature. Please see “Monitor input — CueMix™ Plus” on page 37.

**Controlling monitoring latency**  
See “Monitoring live input” on page 38.

**CUSTOMER SUPPORT**  
We are happy to provide customer support to our registered users. If you haven’t already done so, please take a moment to complete the registration card included with your MOTU 828. When we receive your card, you’ll be placed on our mailing list for free software updates and information about new products.

**REPLACING DISKS**  
If your MOTU 828 software or AudioDesk CD-ROM becomes damaged and fails to provide you with fresh, working copies of the software, our Customer Support Department will be glad to replace it. You can request a replacement disc by calling our business office at (617) 576-2760 and asking for the customer service department.

**TECHNICAL SUPPORT**  
If you are unable, with your dealer’s help, to solve problems you encounter with the MOTU 828 system, you may contact our technical support department in one of the following ways:

- Tech support hotline: (617) 576-3066 (Monday through Friday, 9 am to 6 pm EST)
- Tech support 24-hour fax line: (617) 354-3068
- Tech support email: techsupport@motu.com
- Web site: www.motu.com

Please provide the following information to help us solve your problem as quickly as possible:

- The serial number of the MOTU 828 system. This is printed on a sticker placed on the bottom of the MOTU 828 rack unit. You must be able to supply this number to receive technical support.
- Software version numbers for:
  - AudioDesk
  - The version numbers of the items in the MOTU Folder (in the Extensions Folder of your startup disk), including the MOTU 828 Enabler and MOTU 828 Driver
- A brief explanation of the problem, including the exact sequence of actions which cause it, and the contents of any error messages which appear on the screen.
- The pages in the manual which refer to the parts of the MOTU 828 or AudioDesk with which you are having trouble.
- The version or creation date of the system software you are using to run the Macintosh. This can be found by choosing About this Computer from the Apple menu.

We’re not able to solve every problem immediately, but a quick call to us may yield a suggestion for a problem which you might otherwise spend hours trying to track down.

Our technical support department is dedicated to helping registered users solve their problems quickly. In the past, many people have also taken the time to write to us with their comments, criticism and suggestions for improved versions of our products. We thank them; many of those ideas have been addressed in our development efforts. If you have features or ideas you would like to see implemented, we’d like to hear from you. Please write to the MOTU 828 Development Team, MOTU Inc., 1280 Massachusetts Avenue, Cambridge, MA 02138.
